Samples,2007-09-01 Recent Barna research indicates that less than one in ten evangelical Christians hold a biblical worldview A World of Difference seeks to change this disturbing fact by educating readers on how the Christian perspective is uniquely reasonable verifiable and liveable Author Kenneth Richard Samples faced a profound test of his own belief system during a personal life and death crisis In A World of Difference he uses nine distinct tests to compare the Christian worldview with current religious and philosophical competitors including Islam postmodernism naturalism and pantheistic monism Samples tackles tough issues through this in depth study of Christianity s history creed and philosophical basis An excellent resource for readers who want their view of life and the world to make sense **Ethics and the Autonomy of Philosophy**

Bernard James Walker,2014-11-06 In Ethics and the Autonomy of Philosophy Bernard Walker sets out with two objectives First Walker argues that ethics is autonomous as a discipline Oftentimes ethics books from a Christian perspective lean toward grounding ethics in theology or in biblical proof texting Walker departs from this tradition Ethics grounded in theology entails a limited scope for those doing ethics in that the Christian God must be assumed for both Christian and non Christian when at the table of ethical dialogue For the non Christian this loads the dice and shuts down ethical consensus and dialogue if not ethical truth With that said this book does not depart from Christian ethical views on such issues as the sanctity of life antiracism the death penalty the objectivity of ethics and the importance of integrating faith into ethics however Walker does so from a common denominator of philosophy rather than theology Second Walker ventures into the streets and engages the man woman on the streets approach to ethics and ethical decision making He points out the shortcomings of the ubiquitous views of the man woman on the streets viz cultural relativism skepticism and the attitude that ethics is merely a matter of personal choice **Studyguide for Attacking Faulty Reasoning by Damer, T. Manifest Rationality Ralph H. The Fundamentals of Argument Analysis Richard L Epstein, 2018-11-05 This series of books presents the fundamentals of logic in a style accessible to both students and scholars The text of each essay presents a story the main line of development of the ideas while the notes and appendices place the research within a larger scholarly context The essays overlap forming a unified analysis of logic as the art of reasoning well yet each essay is designed so that it may be read independently The question addressed in this volume is how we can justify our beliefs through reasoning The first essay Arguments investigates what it is that we call true or false and how we reason toward truths through arguments A general theory of argument analysis is set out on the basis of what we can assume about those with whom we reason The next essay Fallacies explains how the classification of an argument as a fallacy can be used within that general approach In contrast there is no agreement on what the terms induction and deduction mean and they are not useful in evaluating arguments as shown in Induction and Deduction In reasoning to truths in the end we must take some claims as basic not requiring any justification for accepting them How we choose those claims and how they affect our reasoning is examined in Basic Claims The essay Analogies considers how comparisons can be used as the basis of arguments arguing from similar situations to similar conclusions An important use of analogies is in reasoning about the mental life of other people and things which is examined in Subjective Claims written with Fred Kroon and William S Robinson Generalizing examines how to argue from part of a collection or mass to the whole or a larger part The question there is whether we are ever justified in accepting such an argument as good Probabilities sets out the three main ways probability statements have been interpreted the logical relation view the frequency view and the subjective degree of belief view Each of those is shown to be inadequate to make precise the scale of plausibility of claims and the scale of the likelihood of a possibility Many discussions of how to reason well and what counts as good reason are given in terms of who or what is rational In the final essay Rationality it's shown that what we mean by the idea of someone being rational is of very little use in evaluating reasoning or actions This volume is meant to give a clearer idea of how to reason well setting out methods of evaluation that are motivated in terms of our abilities and interests At the ground of our reasoning though are metaphysical assumptions too basic and too much needed in our reasoning for us to justify them through reasoning But we can try to uncover those assumptions to see how they are important and what depends on them
