

As the TIT, Boeing offered an executive model of the jet as early as its development, suggesting various spacious layouts for about 30 passengers. With optional seats that range of up to 4,500 sq ft (415 sq m) could be achieved. One of the TIT is an executive jet has included the First Corporation and some foreign governments, including those of Egypt, Niger and Venezuela. NASA, which acquired the original computer-aided TIT-100 in 1973, has its aircraft specially modified to accommodate a second cockpit in the rear.

Reversing such the decision to launch is third jet transport after the 707 and 720 in November 1964, although the formal commitment to put the new type into production had to wait until firm orders were forthcoming. In the event, this point was reached on 19 February 1965 when the German airline Lufthansa announced a contract for 20 Boeing 707-300s, including spares, of about 1961 (the 23 1/2 million). The launch decision came after a period of intensive discussion.

The Boeing 737 Technical Manual Chris Brady, 2006 This book is a plain English illustrated technical guide intended to fill in the gaps left by existing publications It contains facts tips photographs and points of interest rather than simply being a reproduction of the manuals Foreword **Advancements in Electric Machines** J. F. Gieras, 2008-11-14 Traditionally electrical machines are classified into d c commutator brushed machines induction asynchronous machines and synchronous machines These three types of electrical machines are still regarded in many academic curricula as fundamental types despite that d c brushed machines except small machines have been gradually abandoned and PM brushless machines PMBM and switched reluctance machines SRM have been in mass production and use for at least two decades Recently new topologies of high torque density motors high speed motors integrated motor drives and special motors have been developed Progress in electric machines technology is stimulated by new materials new areas of applications impact of power electronics need for energy saving and new technological challenges The development of electric machines in the next few years will mostly be stimulated by computer hardware residential and public applications and transportation systems land sea and air At many Universities teaching and research strategy oriented towards electrical machinery is not up to date and has not been changed in some countries almost since the end of the WWII In spite of many excellent academic research

achievements the academia industry collaboration and technology transfer are underestimated or quite often neglected Underestimation of the role of industry unfamiliarity with new trends and restraint from technology transfer results with time in lack of external nancial support and drastic cline in the number of students interested in Power Electrical Engineering
