**Beyond A-levels** Ann Hodgson, Ken Spours, 2003-12-16 Since its introduction over 50 years ago the A level has been a constant subject of debate in schools HE and government. Sometimes hailed as a gold standard there is now intense speculation about the future of the A level in particular but also about post 14 qualifications in general. The furore about quality and standards which accompanies each year's A level results has become an annual fixture in the UK press calendar. With the introduction of Curriculum 2000 and an increasing number of calls for Baccalaureate style examinations vocational qualifications and more the need for serious debate and change in this field is clear. Based on primary research by two of the leading commentators on the qualifications this book is a wide ranging and critical view of the fundamental approaches of the education system in Britain today. With government action on this subject looking inevitable this will be a challenging and important book for anyone interested in this debate. Timetable Planning and Information Quality Ingo A. Hansen, 2010. The book comprises a number of research papers presented at several Computers in Railways Conferences. It has been compiled by Ingo A Hansen President of the International Association of Railway Operations Research IAROR and comprises selected papers originating from different countries such as Denmark France Germany Japan Italy Netherlands Sweden and Switzerland. The papers give an overview of the current state of the art analytical approaches methods and simulation tools for the modelling and analysis of network timetables the distribution of train delays and real time rescheduling of perturbed operations. The topics include e.g. railway capacity estimation according to the UIC norm 406 train punctuality analysis based on standard track occupation and clearance data and boarding alighting and distribution of passengers along suburban trains as well as fast recognition and resolution of conflicts between train movements in case of disturbances by means of real time speed adaptation re ordering or re routing.
