Molecular and Quantitative Animal Genetics Hasan Khatib, 2015-03-02 Animal genetics is a foundational discipline in the fields of animal science animal breeding and veterinary sciences While genetics underpins the healthy development and breeding of all living organisms this is especially true in domestic animals specifically with respect to breeding for key traits Molecular and Quantitative Animal Genetics is a new textbook that takes an innovative approach looking at both quantitative and molecular breeding approaches The book provides a comprehensive introduction to genetic principles and their applications in animal breeding This text provides a useful overview for those new to the field of animal genetics and breeding covering a diverse array of topics ranging from population and quantitative genetics to epigenetics and biotechnology Molecular and Quantitative Animal Genetics will be an important and invaluable educational resource for undergraduate and graduate students and animal agriculture professionals Divided into six sections pairing fundamental principles with useful applications the book's comprehensive coverage will make it an ideal fit for students studying animal breeding and genetics at any level

Animal Genomics for Animal Health Marie-Hélène Pinard, 2008-01-01 It includes a review of the state of the art in animal genomics and its applications to animal health The contributions describe the new tools available such as HapMaps for chicken and cattle and show how the understanding of gene structure and function can be successfully applied to delineate the molecular mechanisms of disease and determine complex phenotypes associated with health traits A critical evaluation of future needs and future applications of animal genomics is also presented The integration of animal genomics in animal health research is likely to revolutionize the way scientists approach the challenges of discovering highly effective drugs and vaccines for animal diseases

Science Breakthroughs to Advance Food and Agricultural Research by 2030 National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Environmental Change and Society, Health and Medicine Division, Food and Nutrition Board, Division on Earth and Life Studies, Water Science and Technology Board, Board on Life Sciences, Board on Atmospheric Sciences and Climate, Board on Agriculture and Natural Resources, Committee on Science Breakthroughs 2030: A Strategy for Food and Agricultural Research, 2019-04-21 For nearly a century scientific advances have fueled progress in U S agriculture to enable American producers to deliver safe and abundant food domestically and provide a trade surplus in bulk and high value agricultural commodities and foods Today the U S food and agricultural enterprise faces formidable challenges that will test its long term sustainability competitiveness and resilience On its current path future productivity in the U S agricultural system is likely to come with trade offs The success of agriculture is tied to natural systems and these systems are showing signs of stress even more so with the change in climate More than a third of the food produced is

unconsumed an unacceptable loss of food and nutrients at a time of heightened global food demand Increased food animal production to meet greater demand will generate more greenhouse gas emissions and excess animal waste The U S food supply is generally secure but is not immune to the costly and deadly shocks of continuing outbreaks of food borne illness or to the constant threat of pests and pathogens to crops livestock and poultry U S farmers and producers are at the front lines and will need more tools to manage the pressures they face Science Breakthroughs to Advance Food and Agricultural Research by 2030 identifies innovative emerging scientific advances for making the U S food and agricultural system more efficient resilient and sustainable This report explores the availability of relatively new scientific developments across all disciplines that could accelerate progress toward these goals It identifies the most promising scientific breakthroughs that could have the greatest positive impact on food and agriculture and that are possible to achieve in the next decade by 2030

African Livestock Genetic Resources and Sustainable Breeding Strategies Eveline M. Ibeagha-Awemu, Sunday O.

Peters, Appolinaire Djikeng, John E. O. Rege, 2025-12-02 This open access book is a rich resource that chronicles the abundant livestock genetic resources in Africa Organized in five sections the chapters trace special productive and adaptive attributes of African livestock breeds past breed improvement efforts capacity building and strategies to effective utilization of available genetic resources in the era of modern technologies The authors cover major farm animal groups as well as dromedaries rabbits and grasscutters In view of the UN Sustainable Development Goals in particular SDG 2 Zero Hunger and SDG 15 Life on Land the purpose of this volume is to catalogue opportunities that can be leveraged with available technologies and technical knowhow for achieving rapid genetic gain and improved livestock productivity in Africa It fosters the utilization of genetic resources and the protection of indigenous livestock biodiversity Natural selection and humans have generated genetically diverse breeds of domesticated farm animals which can significantly contribute to the livelihoods of millions of Africans today Africa s indigenous livestock are particularly hardy and well adapted to local production contexts having evolved adaptations to the continent s diverse climatic conditions and environmental pressures In spite of the wealth of desirable genetic traits however some of Africa s iconic and lesser known livestock are disappearing at an alarming rate Moreover despite increasing recognition of what this diversity portends little has been done to understand and optimally harness the full potential of these genetic resources By combining scientific basis and practical instructions this work is a valuable manual for a diverse readership including students researchers livestock farmers livestock and non governmental organizations policy makers and business professionals who want to understand the uniqueness of African livestock genetic resources production systems and strategies for sustainable improvement for the African environment **Agrindex** ,1995

Arid Lands Charles Hutchinson, 2019-04-23 The international conference Arid Lands Today and Tomorrow drew more than 400 participants from over 30 countries to Tucson Arizona for one week in October of 1985. The diversity of presenters, disciplines and subject matters addressed contributed to an interesting and informative conference. The papers presented in this volume represent the efforts of scientists and other individuals who through their various disciplines are addressing the problems and opportunities presented by the arid lands of the world. A committee of five scientists reviewed for substance relevance and their contribution to the conference the 284 abstracts that were submitted. They selected 146 for presentation at the conference and of those papers presented 128 were received for inclusion in the proceedings. The pace of innovation in the Life Sciences field is accelerating and the regulatory oversight of the resulting products and technologies needs to evolve and adapt accordingly. Using gene editing techniques as an example from the first applications of CRISPR based methodologies just a few years ago to the present day, the generation of novel applications, editing tools, methodologies and products has been faster than ever. Also, the demand for bio based solutions in agriculture, food production and the environment is growing everywhere and will keep growing and specific criteria for biosafety assessments will be required. Progressive and adaptive criteria for biosafety assessments require a collaborative effort across disciplines, risk assessment experts and institutions around the globe to enable fit for purpose regulations that promote the safe implementation of innovations and their accessibility to society. It is timely to compile a set of publications in one issue which provides an overview of different aspects of the current challenges to adapt biosafety considerations for innovative biotechnological applications. The main goal of this Research Topic is to provide a contextual technical and conceptual base to build upon when considering the evolution and future direction of biosafety regulations. In this context, revisiting the scientific rationale for assessing gene technologies, particularly transgenics in the light of current knowledge and experience is of interest as we advance. In particular, biologicals seem an appropriate case to discuss fit for purpose and adaptive criteria as it is one of the fields that will be expected to grow the most in the near future with diverse applications in agriculture, novel foods, the environment and others. The need for clear and harmonized definitions and language is also vital in achieving modern, transparent and sustainable regulatory frameworks which determine the feasibility of many R D projects reaching the market, especially public sector and small companies. Other aspects to be featured in this Research Topic like the role of regulatory cooperation, experimentation, sandboxes and harmonization and the societal acceptance factor are also critical aspects to consider when discussing the future of biosafety regulations. Areas to be covered in this Research Topic may include but are not limited to: Biosafety revisited, Are current criteria fit for purpose? What makes sense and what does not from the current risk science perspective? GMOs where to focus going forward over 30 years of experiences, learnings, case studies, process vs

product Biologicals applications in agriculture food environment etc they are not plants not chemicals how should a GM microbe be defined Is there a consensus Emerging and re emerging discussions on innovative technologies Synthetic biology Molecular Farming Clear language words matter definitions and concepts in regulatory guidelines and normative interpretation The role of regulatory diplomacy in achieving global progressive regulations Gene Editing global harmonization and international trade is it possible Adaptive regulations Regulatory sandboxes collaborative working models the role of AI The commercialization challenges of including societal economic implications Acceptance perception of innovations impact on regulatory frameworks
