*Guide to Wireless Ad Hoc Networks* Sudip Misra, Isaac Woungang, Subhas Chandra Misra, 2009-03-02 Overview and Goals  
Wireless communication technologies are undergoing rapid advancements. The past few years have experienced a steep growth in research in the area of wireless ad hoc networks. The attractiveness of ad hoc networks in general is attributed to their characteristics features such as ability for infrastructure less setup minimal or no reliance on network planning and the ability of the nodes to self organize and self configure without the involvement of a centralized network manager router access point or a switch. These features help to set up a network fast in situations where there is no existing network setup or in times when setting up a fixed infrastructure network is considered infeasible for example in times of emergency or during relief operations. Even though ad hoc networks have emerged to be attractive and they hold great promises for our future there are several challenges that need to be addressed. Some of the well known challenges are attributed to issues relating to scalability quality of service energy efficiency and security.

*Guide to Wireless Sensor Networks* Sudip Misra, Isaac Woungang, Subhas Chandra Misra, 2009-05-29 Overview and Goals  
Wireless communication technologies are undergoing rapid advancements. The last few years have experienced a steep growth in research in the area of wireless sensor networks (WSNs). In WSNs communication takes place with the help of spatially distributed autonomous sensor nodes equipped to sense specific information. WSNs especially the ones that have gained much popularity in the recent years are typically ad hoc in nature and they inherit many characteristics features of wireless ad hoc networks such as the ability for infrastructure less setup minimal or no reliance on network planning and the ability of the nodes to self organize and self configure without the involvement of a centralized network manager router access point or a switch. These features help to set up WSNs fast in situations where there is no existing network setup or in times when setting up a fixed infrastructure network is considered infeasible for example in times of emergency or during relief operations.

WSNs find a variety of applications in both the military and the civilian population worldwide such as in cases of enemy intrusion in the battlefield object tracking habitat monitoring patient monitoring fire detection and so on. Even though sensor networks have emerged to be attractive and they hold great promises for our future there are several challenges that need to be addressed. Some of the well known challenges are attributed to issues relating to coverage and deployment scalability quality of service size computational power energy efficiency and security.
