Additional Science June 2013 Paper 2:

Cases on Research-Based Teaching Methods in Science Education de Silva, Eugene, 2014-08-31 While the great scientists of the past recognized a need for a multidisciplinary approach today's schools often treat math and science as subjects separate from the rest. This not only creates a disinterest among students but also a potential learning gap once students reach college and then graduate into the workforce. *Cases on Research Based Teaching Methods in Science Education* addresses the problems currently facing science education in the USA and the UK and suggests a new hands on approach to learning. This book is an essential reference source for policymakers, academicians, researchers, educators, curricula developers and teachers as they strive to improve education at the elementary, secondary and collegiate levels.

Sudden arrhythmic death: from basic science to clinical practice Gareth D. Matthews, 2014-10-02 With upwards of 4.5 million deaths worldwide each year and more than one tenth of these occurring in those with no previously documented heart disease, sudden arrhythmic death (SAD) is both a major public health burden and a highly emotive issue for society at large. Recent years have witnessed a marked expansion in our knowledge of the physiology underlying SAD, both in the context of hereditary and acquired cardiac disorders. Thanks largely to work in genetically modified animals, the growth in our understanding of mechanisms underlying arrhythmia in the hereditary channelopathies has been particularly marked. Our growing knowledge of the fundamental mechanisms underlying SAD has so far failed to spur substantial developments in clinical practice. Despite a large body of work in both humans and animals, it remains impossible to confidently identify those at high risk of SAD, making pre-emptive therapy a challenge. What is more, with the thankful exception of the implantable cardioverter defibrillators and pharmacological agents in very specific situations, there has been depressingly little progress in finding new and effective therapies. This Research Topic aims to go some way towards bridging the gap between advances in basic science and the development and delivery of new therapies. It brings together original research contributions and review articles from key opinion leaders in the field, focusing on the direct clinical implications of the basic science research now and in the future.

NLR-protein functions in immunity Thomas A. Kufer, Jörg H. Fritz, 2015-07-08 The Nod-like receptor (NLR) family of proteins are evolutionary conserved molecules that in plants and mammals have been implicated in innate immune sensing of microbes and infection-associated physiological changes contributing to immune protection of the challenged host organism through the instruction of inflammatory responses, antimicrobial defense and adaptive immunity. Recent data, however, suggests that the biological roles of NLR go beyond the function of classical pattern recognition molecules (PRM) as they have been implicated in essential

cellular processes including autophagy apoptosis modification of signal transduction and gene transcription as well as reproductive biology In this research topic we aim to provide a comprehensive state of the art overview of the emerging functions of NLR in plant and mammalian immunity cell biology and reproductive biology Potential topics may include but are not limited to the following areas Functions of NLRs as PRMs in infection Cross talk of NLRs with other PRMs Signal transduction pathways of NLRs New functions of NLRs other than pattern recognition Structural aspects of NLR activation Mechanisms of NLRs in cell biological processes Aspects of NLRs in reproductive biology Functions of NLRs in plant immune responses

Computational research on intrinsic motivation is being complemented by and closely interacting with research that aims to build hierarchical architectures capable of acquiring storing and exploiting the knowledge and skills acquired through intrinsically motivated learning Now is an important moment in the study of intrinsically motivated open ended development requiring contributions and integration across a large number of fields within the cognitive sciences This Research Topic aims to contribute to this effort by welcoming papers carried out with ethological psychological neuroscientific and computational approaches as well as research that cuts across disciplines and approaches
