**Rail Operations Viewed From South Devon** Garth Pedler, 2017-07-04 South Devon a thriving county with the sea, estuary and moorland for recreation owes much of its success and vibrant economy to the railways that provide day return services allowing people to travel freely to and from London and the North. Rail Operations Viewed From South Devon is a comprehensive exploration of the railways in and around South Devon with chapters drawing on areas across the country such as Totnes, Carlisle and Bristol. Embracing a wide range of topics to help the reader understand how railway engineering reached its current state this book aims to encourage discussion about the rail network as an entity. Chapters include the history of the sea and cliff issues associated with Dawlish as well as how the Victorians built a congestion free rail system around Bristol with another chapter detailing the Cross Country timetables of 1925. This extensive insight into the railway also draws on the author's personal experience of undertaking a rail tour to Carlisle and back to Totnes in 1999 following the re privatisation of the rail network in comparison to a previous excursion in 1961. Illustrated throughout with dozens of detailed maps and diagrams as well as useful statistics Rail Operations Viewed From South Devon will appeal to readers who are curious about railway history and the recent management of the rail networks.

**Natural Language Processing of Semitic Languages** Imed Zitouni, 2014-04-22 Research in Natural Language Processing (NLP) has rapidly advanced in recent years resulting in exciting algorithms for sophisticated processing of text and speech in various languages. Much of this work focuses on English. In this book we address another group of interesting and challenging languages for NLP research: the Semitic languages. The Semitic group of languages includes Arabic (206 million native speakers), Amharic (27 million), Hebrew (7 million), Tigrinya (6.7 million), Syriac (1 million) and Maltese (419 thousand). Semitic languages exhibit unique morphological processes, challenging syntactic constructions and various other phenomena that are less prevalent in other natural languages. These challenges call for unique solutions many of which are described in this book.

The 13 chapters presented in this book bring together leading scientists from several universities and research institutes worldwide While this book devotes some attention to cutting edge algorithms and techniques its primary purpose is a thorough explication of best practices in the field Furthermore every chapter describes how the techniques discussed apply to Semitic languages The book covers both statistical approaches to NLP which are dominant across various applications nowadays and the more traditional rule based approaches that were proven useful for several other application domains We hope that this book will provide a one stop shop for all the requisite background and practical advice when building NLP applications for Semitic languages     Arts & Humanities Citation Index ,1997     *Papers Published in Journals and Presented at Meetings, Reports Issued and Theses Completed, by ORNL Staff Members* Oak Ridge National Laboratory,1967
