**Resources in Education** ,1998    A fault detection method for FADS system based on interval-valued neutrosophic sets, belief rule base, and D-S evidence reasoning Qianlei Jia, Jiayue Hu, Weiguo Zhang, Fault detection with the characteristics of strong uncertainty and randomness has always been one of the research hotspots in the field of aerospace. Considering that devices will inevitably encounter various unknown interference in the process of use which greatly limits the performance of many traditional fault detection methods. Therefore the main aim of this paper is to address this problem from the perspective of uncertainty and randomness of measurement signal. In information engineering interval valued neutrosophic sets IVNSs belief rule base BRB and Dempster Shafer D S evidence reasoning are always characterized by the strong ability in revealing uncertainty but each has its drawbacks. As a result the three theories are firstly combined in this paper to form a powerful fault detection algorithm. Besides a series of innovations are proposed to improve the method including a new score function based on p norm for IVNSs and a new approach of calculating the similarity between IVNSs which are both proved by authoritative prerequisites. To illustrate the effectiveness of the proposed method flush air data sensing FADS a technologically advanced airborne sensor is adopted in this paper. The aerodynamic model of FADS is analyzed in detail using knowledge of aerodynamics under subsonic and supersonic conditions meanwhile the high precision model is established based on the aerodynamic database obtained from CFD software    Effective Grading Practices for Secondary Teachers Dave Nagel, 2015-03-04 Enact innovative grading systems that more accurately describe student progress. This book challenges traditional grading practices and provides alternatives that can have direct impact on student success. By making subtle shifts toward standards based grading systems schools can reduce unnecessary course failures, provide students and their families a more accurate picture of current progress and increase opportunities for success. The author offers a range of grading reform strategies that are built from practical frameworks that are effective and simple to adapt. Among the many strengths of this book are Practical application of existing research and evidence base for effective secondary grading reforms. A framework for schools and districts to apply and adapt failure prevention strategies such as early failure detection Amnesty Days and meaningful stipulated second chance opportunities for students to reach mastery. Functional strategies and actions for shifting toward standards based referenced grading without entirely abandoning letter grades. Countering resistance to change through a clearly articulated plan for conducting school wide and classroom level action research around the effectiveness of new or adjusted grading practices. Informative and pragmatic this book is spot on with analysis of this elephant in the room issue. Nagel uses both empathy and humor in getting to the heart of a process to generate real solutions while underscoring the ultimate need for teacher voice in any successful implementation. He provides ready made strategies for real impactful change. I'm left hopeful that feedback will rule the day. Bruce Potter Superintendent Berkshire UFSD Nagel offers an insightful and articulate voice to secondary improvement and alignment through grading.
