

## Calculating Equilibrium Concentrations

Given the Equilibrium Constant AND the initial conditions, equilibrium concentrations can be calculated.

Example:

The equilibrium constant for the reaction

is 0.021 at a certain temperature. If the initial concentration of  $\text{PCl}_5(\text{g})$  is 0.100 mol L<sup>-1</sup>, what are the equilibrium concentrations of all species?

Assume a volume of 1 L.

Initially it contains 0.100 moles  $\text{PCl}_5(\text{g})$ .

At equilibrium,  $x$  moles of  $\text{PCl}_5(\text{g})$  have reacted and therefore  $0.1-x$  moles are left. From the equation  $x$  moles of  $\text{PCl}_3(\text{g})$  and of  $\text{Cl}_2(\text{g})$  have been formed.

## 18 3 Calculating Equilibrium Constants:

Principles of Physical Chemistry Hans Kuhn, David H. Waldeck, Horst-Dieter Försterling, 2024-10-29 Core textbook showcasing the broad scope and coherence of physical chemistry. Principles of Physical Chemistry introduces undergraduate students to the concepts and methods of physical chemistry which are fundamental to all of Chemistry. In their unique approach the authors guide students along a logically consistent pathway from the principles of quantum mechanics and molecular structure to the properties of ensembles and supramolecular machines with many examples from biology and nanoscience. By systematically proceeding from atoms to increasingly complex forms of matter the book elucidates the connection between recognizable paradigms and modern chemistry research in a student friendly manner. To promote intuition and understanding for beginning students the text introduces concepts before proceeding to more rigorous treatments. Rigorous proofs and derivations are provided as electronic supplements for more advanced students. The book poses over 900 exercises and problems to help the student learn and master methods for physicochemical reasoning. Computational supplementary material including Fortran simulations, MathCAD exercises and Mathematica programs are included on a companion website. Some topics discussed in the text are: Electronic structure and Variational Principle including Pauli exclusion, spin orbit interactions and electron confinement in quantum dots. Chemical bonding and molecular structure including electron tunneling, comparison of electron in a box models and electron orbital methods and the mechanics of chemical bonds. Absorption and emission of light including transition dipoles for electron systems, coupled chromophores, excitons and chiroptical activity. Statistical description of molecular ensembles including microscopic interpretations of phase transitions, entropy, work and heat. Chemical equilibria including statistical description of equilibrium constants, electrochemistry and the exposition of fundamental reaction types. Reaction kinetics and reaction dynamics including nonlinear coupled reactions, femtochemistry and solvent effects on reactions. Physicochemical properties of macromolecules and the principles of supramolecular assemblies including polymer dynamics and chemical control of interfaces. The logic of supramolecular machines and their manipulation of photon, electron and nuclear motion. With its highly coherent and systematic approach to the subject, Principles of Physical Chemistry is an ideal textbook and resource for students in undergraduate physical chemistry courses especially those in programs of study related to chemistry, engineering and molecular and chemical biology.

Physical Chemistry for Engineering and Applied Sciences is the product of over 30 years of teaching first year Physical Chemistry as part of the Faculty of Applied Science and Engineering at the University of Toronto. Designed to be as rigorous as compatible with a first year student's ability to understand the text presents detailed step by step derivations of the equations that permit the student to follow the underlying logic and of equal importance to appreciate any simplifying

assumptions made or mathematical tricks employed In addition to the 600 exercises and end of chapter problems the text is rich in worked non trivial examples many of which are designed to be inspiring and thought provoking Step by step derivation of all equations enables the student to smoothly follow the derivation by sight and can be understood relatively easily by students with moderate skills and backgrounds in mathematics Clear and accessible Physical Chemistry for Engineering and Applied Sciences includes The answers to all of the 112 worked examples 99 exercises following many of the worked examples and 496 end of chapter problems Topics not normally seen in introductory physical chemistry textbooks ionic reaction rates activities and activity coefficients or not regularly explained in much detail electrochemistry chemical kinetics with an eye on industrial applications Special appendices that provide detailed explanations of basic integration and natural logarithms for students lacking a background in integral calculus An in depth chapter on electrochemistry in which activities and activity coefficients are used extensively as required for accurate calculations Atkins' Physical Chemistry Peter William Atkins,Julio De Paula,James Keeler,2023 Revised edition of Atkins Physical chemistry Peter Atkins Julio de Paula James Keeler Eleventh edition 2018 Cehmistry Textbook for College and University USA Ibrahim

should be independent of the method of synthesis at least in the ideal case Part I is thus concerned with the chemical and physical structure of polymers Properties depend on structure Solution properties are thus discussed in Part II solid state properties in Part III There are other reasons for discussing properties before synthesis For example it is difficult to understand equilibrium polymerization without knowledge of solution thermodynamics the gel effect without knowledge of the glass transition temperature etc Part IV treats the principles of macromolecular syntheses and reactions
