Reaction Rates

Name: _____ Date: _____

Reading Passage

Read the passage carefully before answering the questions that follow.

Reaction rates can be defined as understanding chemical processes and are affected by various factors including temperature, concentration, surface area, and volume significantly alter the frequency of molecular collisions and the energy distribution during reacting species. Heavily understanding in determining reaction temperature increases lead to more reaction rates exponentially than in the Arrhenius equation, which relates temperature to the rate constant through activation energy. Higher temperatures provide reaction molecules with more kinetic energy, increasing the likelihood of overcoming the activation energy barrier.

Concentration and surface area influence reaction rates by affecting how often particles collide. Increased concentrations result in more frequent collisions among reaction molecules, leading to faster reactions, while an increase in surface area, especially in heterogeneous reactions, provides more contact area for reactants, further boosting the rate. Catalysts serve to reaction pathways, lowering the activation energy without being consumed, thus enabling the reaction to proceed more rapidly at a given temperature.

Reaction mechanisms such as decomposition reactions, combustion hydrogencations, and heterogeneous reactions determine the sequence of energy transfer and collision events. Decomposition reactions in single reactant leading into multiple products, often requiring energy input. Combustion hydrogencations involve a catalyst such as platinum facilitating the addition of hydrogen to unsaturated compounds, releasing low energy under more activation energy. In heterogeneous reactions, the reaction occurs on the surface of a solid catalyst, where the energy transfer and surface properties determine the pathway and the speed and volume of the reaction. Thermal energy (heat) typically speeds these energy transfer, allowing for a constant and temperature beyond the energy profile of reactions, affecting both the rate and pathway selection. Understanding these principles is crucial in fields such as polymer synthesis, environmental chemistry, and food science processes where controlling reaction rates is vital for efficiency and safety.

The knowledge helps chemists optimize reaction conditions, design better catalysts, and predict reaction behavior under varying environmental circumstances.

True or False

Circle whether each statement is True or False.

- Increasing the temperature of a reaction always speeds up the reaction exponentially because of the Arrhenius equation. ☐
- Catalysts increase the energy barrier that reaction rates overcome in their products. ☐

A Solution to the Reaction Rate Equations in the Atmosphere Below 150 Kilometers Thomas J. Keneshea, 1963 One way to acquire a better understanding of the formation and destruction of ionization in the atmosphere is through the solution of the system of time dependent reaction rate equations These ordinary differential equations form a simultaneous set each question of which describes the time rate of change of a particular atmospheric constituent In the general problem all the molecules and atoms whether neutral charged or excited as well as the free electrons would be included A computer program is presented for developing the numerical solution to this problem The method of solution of the set of equations uses a fourth order Runge Kutta integration with a variable mesh When a species enters its quasi equilibrium state its differential equation is removed from the set and its equilibrium equation is inserted into the simultaneous algebraic set The algebraic set is solved by the method of successive substitutions The over all solution is obtained by iteration between the differential and the algebraic sets The ability of the computer program to develop extensive solutions is demonstrated by several examples taken under different conditions *Atkins' Physical Chemistry* Peter William Atkins, Julio De Paula, James Keeler, 2023 Revised edition of Atkins Physical chemistry Peter Atkins Julio de Paula James Keeler Eleventh edition 2018
