The atom - ancient views

Question 1

State the main postulates of - Dalton's atomic theory. Explain how the modern atomic theory contradicted Dalton's atomic theory.

Answer

Postulates of Dalton's atomic theory : Matter consists of particles called - atoms, which are indivisible & cannot be created or destroyed.

1. Atoms of the same element are alike but differ from atoms of all other elements.
2. Compounds or molecules are formed when atoms combine with other atoms in simple whole number ratios.
3. An atom is the smallest unit of matter which takes part in a chemical reaction.

Contradiction :

Modern atomic theory
Atoms are destructible
Atoms are divisible & consist of - protons, electrons & neutrons
Atoms of the same element may not be alike as seen in case of isotopes

Dalton's atomic theory
Atoms are indestructible
Atoms are indivisible & smallest particle of an element.
Atoms of the same element are alike in all respect.

Sub-atomic particles

Question 2

With reference to the discovery of the structure of an atom, explain in brief - William Crookes experiment for the discovery of cathode rays, followed by - J.J. Thomson's

Materials Science for Engineers J.C. Anderson, Keith D. Leaver, Rees D. Rawlings, Patrick S. Leever, 2004-06-01 This fifth edition of a successful textbook continues to provide students with an introduction to the basic principles of materials science over a broad range of topics The authors have revised and updated this edition to include many new applications and recently developed materials The book is presented in three parts The first section discusses the physics chemistry and internal structure of materials The second part examines the mechanical properties of materials and their application in engineering situations The final section presents the electromagnetic properties of materials and their application Each chapter begins with an outline of the relevance of its topics and ends with problems that require an understanding of the theory and some reasoning ability to resolve These are followed by self assessment questions which test students understanding of the principles of materials science and are designed to quickly cover the subject area of the chapter This edition of Materials Science for Engineers includes an expanded treatment of many materials particularly polymers foams composites and functional materials Of the latter superconductors and magnetics have received greater coverage to account for the considerable development in these fields in recent years New sections on liquid crystals superalloys and organic semiconductors have also been added to provide a comprehensive overview of the field of materials science Atomic

Structure Prediction of Nanostructures, Clusters and Surfaces Cristian V. Ciobanu, Cai-Zhuan Wang, Kai-Ming Ho, 2013-02-14 This work fills the gap for a comprehensive reference conveying the developments in global optimization of atomic structures using genetic algorithms Over the last few decades such algorithms based on mimicking the processes of natural evolution have made their way from computer science disciplines to solid states physics and chemistry where they have demonstrated their versatility and predictive power for many materials Following an introduction and historical perspective the text moves on to provide an in depth description of the algorithm before describing its applications to crystal structure prediction atomic clusters surface and interface reconstructions and quasi one dimensional nanostructures The final chapters provide a brief account of other methods for atomic structure optimization and perspectives on the future of the field Cehmistry

Sendil Kumar,2024-08-02 Guide to Materials and Manufacturing

Processes provides a thorough exploration of the essential principles and practices that drive modern manufacturing. The book is structured to cover both foundational concepts and advanced techniques making it a versatile resource for a wide range of readers. Beginning with an introduction to materials science, the guide delves into the characteristics and classifications of various materials including metals, polymers, ceramics, and composites. It then explores manufacturing processes in detail from traditional methods like casting and machining to modern techniques such as additive manufacturing and smart manufacturing. Each chapter is designed to build upon the previous offering a cohesive understanding of how materials and processes interrelate. By integrating theoretical knowledge with practical applications, this book aims to equip readers with the tools necessary to tackle challenges in the field and contribute to innovations in manufacturing. Whether used as a textbook or a reference guide, it is intended to support a deeper appreciation and mastery of materials and manufacturing processes.
