**Weathering:** The weathering of rocks is the process by which rocks are broken down into smaller pieces. This process is driven by a variety of factors, including temperature, moisture, and the presence of living organisms. Weathering can be physical (mechanical) or chemical (chemical). Physical weathering involves the breaking of rocks into smaller pieces without changing their chemical composition. Chemical weathering involves the breaking of rocks into smaller pieces and the formation of new minerals. Weathering is a key process in the rock cycle and is responsible for the formation of soil.
