**Advancements in Electric Machines** J. F. Gieras, 2008-11-14 Traditionally electrical machines are classified into d c commutator brushed machines induction asynchronous machines and synchronous machines These three types of electrical machines are still regarded in many academic curricula as fundamental types despite that d c brushed machines except small machines have been gradually abandoned and PM brushless machines PMBM and switched reluctance machines SRM have been in mass production and use for at least two decades Recently new topologies of high torque density motors high speed motors integrated motor drives and special motors have been developed Progress in electric machines technology is stimulated by new materials new areas of applications impact of power electronics need for energy saving and new technological challenges The development of electric machines in the next few years will mostly be stimulated by computer hardware residential and public applications and transportation systems land sea and air At many Universities teaching and research strategy oriented towards electrical machinery is not up to date and has not been changed in some countries almost since the end of the WWII In spite of many excellent academic research

achievements the academia industry collaboration and technology transfer are underestimated or quite often neglected Underestimation of the role of industry unfamiliarity with new trends and restraint from technology transfer results with time in lack of external nancial support and drastic cline in the number of students interested in Power Electrical Engineering

in mathematics galois cohomology is the study of the group cohomology of galois modules that is the application of homological algebra to modules for galois groups a galois group  $G$  associated to a field extension  $L/K$  acts in a natural way on some abelian groups for example those constructed directly from  $L$  but also through other galois representations that may be derived by more abstract means galois cohomology accounts for the way in which taking galois invariant elements fails
