Setting the Stage

Mario C. Barbiere, 2018-05-04 Setting the Stage promotes a Learner's Brain Model using brain

research to understand the nature to the learner so teachers can develop lessons based on the nature of the learner There is also a focus on student self regulation The first chapter is devoted to the nature of the learner so teachers and administrators can begin a reflection process of determining what they do and how the learner learns to see if there is a match between what is taught and how it will be processed Too often low student achievement and school turnaround is focused on fixing teachers and not on understanding the learner enabling teachers to adapt their strategies more effectively Strategies which address student learning lead to more effective lessons Following the nature of the learner subsequent chapters discuss planning lessons that make sense and have meaning so the information gets stored in long term memory Once information is in long term memory it is retrievable for use Strategies are provided throughout the book supported by brain research to help teachers plan lessons

Modern Mathematics Dirk De Bock,2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends
