**Teaching Children Mathematics**, 2003 Skills for Success for Your Second Grader Annette Taulbee, Frank Schaffer Publications, 1997 Teaching Learners who Struggle with Mathematics Helene J. Sherman, Lloyd I. Richardson, George J. Yard, 2009 This book was written to give teachers the tools they need to help students go from believing they can't do math to achieving real success and gaining confidence in their math skills. This can be accomplished if parents and teachers instead of trying the same thing over and over again focus on how their students learn best. To do this the authors present a systematic three step approach on how to assess student's strengths and weaknesses and then plan instruction accordingly. The three step plan involves 1 Creating a Data Analysis Sheet DAS 2 Considering the learners strengths and areas of concern 3 Completing a Mathematics Improvement Plan MIP. Each chapter deals with a different mathematical topic: place value, problem solving, fractions, addition, subtraction, division, decimals, time, and money, etc. A number of errors by a variety of students are described using a case study of a typical struggling student. The text then explains how teachers can systematically assess the student's work and appropriately diagnose their problems. By analyzing and understanding why and how their students make errors, teachers can design appropriate ways to correct their mistakes and then promote long term learning through repetition and practice that is meaningful to them. This book addresses mathematics education in a manner that encourages positive content growth and attitude for both teachers and students.
