### Notes

- T1 includes T1a.
- T2 and T3 tumors with nodal micrometastases only are included from Stage III and are classified Stage III.
- M0 excludes M0a-c.
- The designation pM0 is not valid; any M0 should be clinical.
- If a patient receives an M1 prior to nonadjuvant systemic therapy, the stage is considered Stage III and remains Stage III regardless of response to nonadjuvant therapy.
- Stage designation may be changed if postoperative imaging studies reveal the presence of distant metastases, provided that the studies are carried out within 4 months of diagnosis in the absence of disease progression and provided that the patient has not received nonadjuvant therapy.
- Nonadjuvant therapy is designated with "p" or "x" prefix. Of note, no stage group is assigned if there is a complete pathologic response (pCR) to nonadjuvant therapy, for example, pT0N0M0.

## Ajcc Breast Staging 7th Edition:

**Radiation Oncology Study Guide** Celine Bicquart Ord, Eric K. Hansen, Charles R. Thomas, Jr., 2013-12-21 Radiation Oncology Study Guide is a comprehensive study aid for radiation oncology residents preparing for the American Board of Radiology Radiation Oncology Initial Certification board exam. Presenting the fundamental principles of radiation oncology the book covers the most salient and commonly tested facts on the exam. Organized by specific disease sites each chapter presents a series of questions and answers that present clinical features, staging principles, treatment and evidence based studies that guide treatment recommendations with an emphasis on radiotherapy studies. The book offers over 1 000 multiple choice questions with detailed answers and rationales.

**Breast Imaging** Christoph I. Lee, Constance D. Lehman, Lawrence W. Bassett, 2018 Breast Imaging presents a comprehensive review of the subject matter commonly encountered by practicing radiologists and radiology residents in training. This volume includes succinct overviews of breast cancer epidemiology, screening, staging and treatment overviews of all imaging modalities including mammography, tomosynthesis, ultrasound and MRI. Step by step approaches for image guided breast interventions and high yield chapters organized by specific imaging finding seen on mammography, tomosynthesis, ultrasound and MRI. Part of the Rotations in Radiology series this book offers a guided approach to breast imaging interpretation and techniques highlighting the nuances necessary to arrive at the best diagnosis and management. Each chapter contains a targeted discussion of an imaging finding which reviews the anatomy and physiology, distinguishing features, imaging techniques, differential diagnosis, clinical issues, key points and further reading. Breast Imaging is a must read for residents and practicing radiologists seeking a foundation for the essential knowledge base in breast imaging.

**Decision Tools for Radiation Oncology** Carsten Nieder, Laurie E. Gaspar, 2014-03-13 A look at the recent oncology literature or a search of the common databases reveals a steadily increasing number of nomograms and other prognostic models. These models may predict the risk of relapse, lymphatic spread of a given malignancy, toxicity, survival, etc. Pathology, information, gene signatures and clinical data may all be used to compute the models. This trend reflects increasingly individualized treatment concepts, the need for approaches that achieve a favorable balance between effectiveness and side effects and the goal of optimal resource utilization reflecting prognostic knowledge. In order to avoid misuse, it is important to understand the limits and caveats of prognostic and predictive models. This book provides a comprehensive overview of such decision tools for radiation oncology, stratified by disease site which will enable readers to make informed choices in daily clinical practice and to critically follow the future development of new tools in the field.
