

## Unit 2 Genetic Processes

### Unit Preparation Questions

#### (Assessing Readiness)

(Student textbook pages 154–7)

1. b

2. In both animal and plant cells: A—cell membrane  
B—cytosol  
C—mitochondria  
E—endoplasmic reticulum (smooth and rough)  
G—Golgi apparatus  
H—nucleus (or nuclear envelope)  
I—nucleus (or nuclear envelope)  
In plant cell only: J—central vacuole  
L—cell wall (or membrane)  
K—chloroplast  
In animal cell only: L—ribosomes  
P—vesicle

3. For efficient movement of materials the ratio of a cell's surface area to volume must stay within a range that permits diffusion to all parts of the cell within a short amount of time (to support the metabolic activity of the cell).

4. d

5. Nucleus (contains) → chromosomes (composed of) → DNA (which is made up of) → genes (which code for) → proteins

6. d

7. Students should draw a double helix and label any small piece as a gene.

8. a

9. c

10. Mitosis involves the division of the nuclear material in the nucleus and cytokinesis is the process that divides the cytoplasm (including all organelles).

11. During cell division, DNA is tightly coded in chromosomes and looks “bunched.” The rest of the time, the DNA looks more like long, loose threads.

12. A—centrosome  
B—chromosomes  
C—spindle fibres  
D—centromere

13. Daughter cells formed during cell division are genetically identical to the parent cell.

14. In plant cells, a cell plate is formed during cytokinesis and divides the cytoplasm into two. Animal cells are divided by a contractile ring rather than a cell plate.

15. A—interphase  
B—growth and preparation (G1)  
C—DNA replication  
D—growth and preparation (G2)  
E—mitosis  
F—cytokinesis

16. Any two of: the DNA may be damaged; DNA replication may not have occurred; there were not enough nutrients to support cell growth; no additional cells of that type are needed; cell death may have been signalled.

17. Sample answer: Skin cells have a short life span—skin is easily damaged and must often be replaced. Nerve cells have a long life span—these internal cells are rarely damaged and, once an organism is full size, there is no need to divide for growth.

18. Cancer results from uncontrolled cell reproduction and the lack of cell death triggered by errors in DNA.

19. Sample answer: The digestive system is made of organs including the stomach and small intestine, and tissues like muscle (which move food along) or epithelium (which line the tract). Muscle tissue is made of muscle cells and epithelial tissue is made of epithelial cells. Diagrams could look like the one that accompanies question 38 on student textbook page 437.

20. Cell differentiation describes the process by which a cell specializes to perform a specific function. Because they perform different jobs, muscle cells look very different from skin cells and nerve cells, for example. If cells didn't differentiate, they would all be generalists—they would be able to do all functions, but not very well.

21. Stem cells can specialize to become many types of cell. Other types of adult cells can only divide to produce cells identical to themselves.

**Pharmacology and the Nursing Process E-Book** Linda Lane Lilley, Shelly Rainforth Collins, Julie S. Snyder, 2022-01-19

Focus on need to know information includes discussions of what nurses may encounter during drug administration in a variety of health care settings providing accounts of real life medication errors and tips for avoiding those errors. The Nursing Process is applied to each category of drugs ensuring that you administer medications accurately and safely and includes the steps of assessment human need statements planning implementation and evaluation. Emphasis on drug classes describes key similarities and differences among the drugs in each class making it easier to understand how individual drugs work in the body. Consistent presentation for each drug group includes the mechanism of action indications contraindications adverse effects interactions and dosages concluding with drug profiles of individual drugs in the class or group. High alert icons identify medications that pose a greater risk to patient safety. Focus on prioritization includes prioritized nursing diagnoses along with a corresponding prioritization of goals and outcomes to help you learn to connect nursing diagnoses with goals and outcomes. Ease of readability makes difficult content more understandable. Photo atlas features more than 100 drawings and photographs showing drug administration techniques. Dosages tables summarize generic and trade names pharmacologic class normal dosage ranges and indications for the drugs. Learning features at the beginning of each chapter include objectives and key terms and at the end of each chapter key points critical thinking questions review questions and a list of resources available on the Evolve website. QSEN coverage includes the use of human need theory with human need statements case studies featuring collaboration and teamwork content. Preventing Medication Errors boxes and a discussion of the QSEN initiative as it relates to the safety and quality of patient care. NEW Updated drug content reflects the latest FDA drug approvals withdrawals and therapeutic uses and includes updated nursing content

Cardwell, Kitty F., Bailey, Keith L., 2022-01-21. Agriculture is often under the threat of invasive species of animal pests and pathogens that do harm to crops. It is essential to have the best methods and tools available to prevent this harm. Biosecurity is a mixture of institutions policies and science applications that attempts to prevent the spread of unhealthy pests. Tactical Sciences for Biosecurity in Animal and Plant Systems focuses on the tactical sciences needed to succeed in the biosecurity objectives of preventing plant and animal pathogens from entering or leaving the United States. This book explores a divergence of tactics between plant and animal exotic disease response. Covering topics such as animal pests and pathogens, tactical management and early detection, this book is an essential resource for researchers, academicians, university faculty, government biosecurity practitioners, customs officers, clinical scientists and students

[Intraspecific Genetic Diversity](#)

Yuri Petrovich Altukhov,2005-11-24 Population and evolutionary genetics have been quickly developing fields of biological research over the past decades This book compiles our current understanding of genetic processes in natural populations In addition the book provides the author's original ideas and concepts based on the data obtained by himself and his close coworkers The author introduces his pioneering concept of population genetic stability and much of the book is concerned with the factors and conditions of such stability Why does genetic stability matter so much Altukhov argues that the sustainable use of natural resources including genetic resources of populations critically depends on the maintenance of their stability The preservation of well adapted genetic characteristics from one generation to the next is essential for this stability Traditionally population genetics has been focused on evolution and the role of evolutionary factors in shaping genetic structures of populations While the idea of a population as a dynamic unit of evolution has been widely accepted the significance of genetic stability and its implications for the long term survival of populations and species have not been fully appreciated
