## Section 3–2 Energy Flow (pages 67–73)

This section explains where the energy for life processes comes from. It also describes how energy flows through living systems and how efficient the transfer of energy is among organisms in an ecosystem.

### Introduction (page 67)

1. What is at the core of every organism's interaction with the environment?  
At the core is its need for energy to power life's processes.

### Producers (pages 67–68)

2. What source of energy do organisms use that don't use the sun's energy?  
Such organisms rely on the energy stored in inorganic chemical compounds.
3. What are autotrophs? They are organisms that can capture energy from sunlight or chemicals and use that energy to produce food.
4. Why are autotrophs also called producers? They make their own food.
5. What do autotrophs do during photosynthesis? They use light energy to power chemical reactions that convert carbon dioxide and water into oxygen and energy-rich carbohydrates such as sugars and starch.
6. For each of the following, write which kind of autotroph is the main producer.
  - a. Land: Plants
  - b. Upper layers of ocean: Algae
  - c. Tidal flats and salt marshes: Photosynthetic bacteria
7. What is chemosynthesis? It is the process by which organisms use chemical energy to produce carbohydrates.
8. Where do bacteria that carry out chemosynthesis live? They live in remote places, such as volcanic vents on the deep-ocean floor and hot springs in Yellowstone Park. They also live in more common places, such as tidal marshes along the coast.

### Consumers (pages 68–69)

9. Heterotrophs are also called consumers.
10. Plant and animal remains and other dead matter are collectively called detritus.

research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume
