

PhET Lab: Ohm's Law & Series and Parallel Circuits

Objectives:

1. Determine how to calculate the total resistance in a series circuit.
2. Build and analyze parallel circuits.
3. Determine how total current and branch currents are related in parallel circuits.

Google "PhET Circuit Construction Kit: DC Virtual Lab" and start the simulation.

Part I: Series Circuits

Procedure:

1. Build a circuit that has TWO small batteries and ONE resistor (R1), like in the picture to the right.
Make sure the current is flowing clockwise. If it is flowing counterclockwise, click on each battery and flip it around using the yellow battery button on the bottom of the page.
2. Record the battery voltage in the data table.
3. Set the resistance of the resistor to a resistance between 1 and 10 ohms. Record the current in the data table.
4. Add a second resistor (R2) ABOVE the first resistor and set it to a resistance between 1 and 10 ohms. Record the current in the data table.
5. Add a third resistor (R3) to the circuit ABOVE the first two resistors and set it to a resistance between 1 and 10 ohms. Record the current in the data table.
6. Using Ohm's Law (in the form $R = \frac{V}{I}$), calculate total resistance in each circuit, using the battery voltage and current for each circuit.

Combined voltage of the two batteries = _____

Resistance of R1 = _____ Resistance of R2 = _____ Resistance of R3 = _____

	Circuit with R1	Circuit with R1 and R2	Circuit with R1, R2 and R3
Current in amps			
Resistance in ohms (calculated)			

Study your calculated resistances in Table 2. What is the rule for calculating total resistance in a series circuit, from individual resistances? (3 pts)

Improving K-12 STEM Education Outcomes through Technological Integration Urban, Michael J., Falvo, David A., 2015-11-12 The application of technology in classroom settings has equipped educators with innovative tools and techniques for effective teaching practice Integrating digital technologies at the elementary and secondary levels helps to enrich the students learning experience and maximize competency in the areas of science technology engineering and mathematics Improving K 12 STEM Education Outcomes through Technological Integration focuses on current research surrounding the effectiveness performance and benefits of incorporating various technological tools within science technology engineering and mathematics classrooms Focusing on evidence based approaches and current educational innovations this book is an essential reference source for teachers teacher educators and professionals interested in how emerging technologies are benefiting teaching and or learning efficacy

Representation, Inclusion, and Innovation

Clayton Lewis, 2022-05-31 A representation is a thing that can be interpreted as providing information about something a map or a graph for example This book is about the expanding world of computational representations representations that use the power of computation to provide information in new forms and in new ways Unlike printed maps or graphs computational representations can be dynamic and even interactive so that what is represented and how can be shaped by user actions Exploring these new possibilities can be guided by an emerging theory of representation that clarifies what characteristics representations must have to express the meaning being represented and to enable users to discern that meaning easily and accurately The theory also shows the way to inclusive design for example using sounds to represent information commonly presented visually so that people who cannot see can understand what is being presented Because representations must be shaped by the abilities of their users and by the nature of the meanings they convey creating them requires perspectives from multiple disciplines including psychology as well as computer science and the sciences appropriate to the content being expressed The book presents a series of explorations of this large and complicated space as invitations to further study and to innovation
