**Foundations for Analytics with Python** Clinton W. Brownley, 2016-08-16 If you're like many of Excel's 750 million users you want to do more with your data like repeating similar analyses over hundreds of files or combining data in many files for analysis at one time. This practical guide shows ambitious non-programmers how to automate and scale the processing and analysis of data in different formats by using Python. After author Clinton Brownley takes you through Python basics you'll be able to write simple scripts for processing data in spreadsheets as well as databases. You'll also learn how to use several Python modules for parsing files, grouping data and producing statistics. No programming experience is necessary. Create and run your own Python scripts by learning basic syntax. Use Python's csv module to read and parse CSV files. Read multiple Excel worksheets and workbooks with the xlrd module. Perform database operations in MySQL or with the mysqlclient module. Create Python applications to find specific records, group data and parse text files. Build statistical graphs and plots with matplotlib, pandas, ggplot and seaborn. Produce summary statistics and estimate regression and classification models. Schedule your scripts to run automatically in both Windows and Mac environments. [Federal Register](#), 2013-11
