Standard Nomenclature for Airspeeds with Tables and Charts for Use in Calculation of Airspeed William J. Aiken, 1946 Symbols and definitions of various airspeed terms that have been adopted as standard by the NACA Subcommittee on Aircraft Structural Design are presented. The equations charts and tables required in the evaluation of true airspeed calibrated airspeed equivalent airspeed impact and dynamic pressures and Mach and Reynolds numbers have been compiled. Tables of the standard atmosphere to an altitude of 65 000 feet and a tentative extension to an altitude of 100 000 feet are given along with the basic equations and constants on which both the standard atmosphere and the tentative extension are based

Uncertainty Quantification and Model Calibration Jan Peter Hessling, 2017-07-05 Uncertainty quantification may appear daunting for practitioners due to its inherent complexity but can be intriguing and rewarding for anyone with mathematical ambitions and genuine concern for modeling quality. Uncertainty quantification is what remains to be done when too much credibility has been invested in deterministic analyses and unwarranted assumptions. Model calibration describes the inverse operation targeting optimal prediction and refers to inference of best uncertain model estimates from experimental calibration data. The limited applicability of most state of the art approaches to many of the large and complex calculations made today makes uncertainty quantification and model calibration major topics open for debate with rapidly growing interest from both science and technology addressing subtle questions such as credible predictions of climate heating
