

## Static electricity and current electricity

Electricity is a form of energy coming from moving or stationary charged particles.

- Current electricity is the flow of electrons through a conductor
- Static electricity is an electric charge fixed on the surface of an object, caused by the object's gaining or losing electrons.

## Charge

Charge is a huge amount of electrons. The symbol of charge is  $Q$  and it can be measured using an electroscope. In fact if there are  $6 \times 10^{18}$  electrons we say there is 1 Coulomb (1 C) of charge.

$$1 \text{ C} = 6 \times 10^{18} \text{ electrons}$$

## Current

If charge flows through a circuit (not static) we say there is current electricity. Current is the rate of flow of charge.

For a low current, few Coulombs of charge pass a point during one second

For a high current, many coulombs of charge pass a point in one second

So, 
$$\text{Current} = \frac{\text{Charge}}{\text{Time}} \quad \text{or} \quad I = \frac{Q}{t}$$

Where  $I$  is the current measured in Amperes, symbol  $A$

$Q$  is the charge measured in Coulombs, symbol  $C$

$t$  is the time measured in Seconds, symbol  $s$

## Examples

1. If 10C of charge pass through a bulb in 5s what is the current?
2. A current of 6A flows through a wire for 2 minutes. What is the total charge which passes through the wire?
