

1. The pesticide diazinon is in common use to treat infestations of the German cockroach, *Blattella germanica*. A study investigated the persistence of this pesticide on various types of surfaces. Researchers applied a 0.5% emulsion of diazinon to glass and plasterboard. After 14 days, they randomly assigned 72 cockroaches to two groups of 36, placed one group on each surface, and recorded the number that died within 48 hours. On glass, 18 cockroaches died, while on plasterboard, 25 died. Construct and interpret a 90% confidence interval for the difference in the proportion of cockroaches that die on each surface.

**State:** Our parameters of interest are

$p_1$  = the proportion of all cockroaches similar to those in the study that die on plasterboard and

$p_2$  = the proportion of all cockroaches similar to those in the study that die on glass

We want to estimate the difference  $p_1 - p_2$ , at a 90% confidence level.

**Plan:** We should use a 2-sample z-interval for  $p_1 - p_2$ .

**Random:** Cockroaches were randomly assigned to one of the two treatment groups, plasterboard or glass.

**Large Counts/Normal:** Number of successes and failures in the two groups are 25, 11, 18, and 18, all of which are at least 10, it is safe to do Normal calculations.

**10%:** Since no sampling took place, the 10% condition does not apply.

$$\hat{p}_1 = \frac{25}{36} = 0.694 \quad \text{and} \quad \hat{p}_2 = \frac{18}{36} = 0.5$$

**Do:** 
$$(\hat{p}_1 - \hat{p}_2) \pm z^* \sqrt{\frac{\hat{p}_1(1 - \hat{p}_1)}{n_1} + \frac{\hat{p}_2(1 - \hat{p}_2)}{n_2}} = (0.694 - 0.5) \pm 1.645 \cdot \sqrt{\frac{0.694(1 - 0.694)}{36} + \frac{0.5(1 - 0.5)}{36}} = (0.00807, 0.38082)$$

**Conclude:** We are 90% confident that the interval from 0.00807 to 0.38082 captures the true difference in the proportion of cockroaches that die on glass versus the proportion that die on plasterboard.

For #2 – 5, choose the correct procedure.

2. A study of “adverse symptoms” in users of over-the-counter pain relief medications assigned subjects at random to one of two common pain relievers: acetaminophen and ibuprofen. In all, 650 subjects took acetaminophen, and 44 experienced some adverse symptom. Of the 347 subjects who took ibuprofen, 49 had an adverse symptom. Estimate the true difference in the proportions of people who experience adverse reactions to these two medications.

**b) Two-Sample  $z$  Interval for a Difference between Two Proportions**

3. As the Hispanic population in the United States has grown, businesses have tried to understand what Hispanics like. One study interviewed a random sample of customers leaving a bank. Customers were classified as Hispanic if they preferred to be interviewed in Spanish or as Anglo if they preferred English. Each customer rated the importance of several aspects of bank service on a 10-point scale. Here are summary results for the importance of “reliability” (the accuracy of account records and so on):

Group	$n$	$\bar{x}$	$s_x$
Anglo	92	6.37	0.60
Hispanic	85	5.91	0.93

What inference procedure would you use to estimate the difference between the mean ratings of the importance of reliability for Anglo and Hispanic bank customers?

Barsalou, Joel Smith, 2018-12-19 This book was written to provide guidance for those who need to apply statistical methods for practical use While the book provides detailed guidance on the use of Minitab for calculation simply entering data into a software program is not sufficient to reliably gain knowledge from data The software will provide an answer but the answer may be wrong if the sample was not taken properly the data was unsuitable for the statistical test that was performed or the wrong test was selected It is also possible that the answer will be correct but misinterpreted This book provides both guidance in applying the statistical methods described as well as

instructions for performing calculations without a statistical software program such as Minitab One of the authors is a professional statistician who spent nearly 13 years working at Minitab and the other is an experienced and certified Lean Six Sigma Master Black Belt Together they strive to present the knowledge of a statistician in a format that can be easily understood and applied by non statisticians facing real world problems Their guidance is provided with the goal of making data analysis accessible and practical Rather than focusing on theoretical concepts the book delivers only the information that is critical to success for the practitioner It is a thorough guide for those who have not yet been exposed to the value of statistics as well as a reliable reference for those who have been introduced to statistics but are not yet confident in their abilities
