Ontology and Closeness in Human-Nature Relationships Neil H. Kessler, 2018-10-10 In Ontology and Closeness in Human Nature Relationships Neil H Kessler identifies the preconceptions which can keep the modern human mind in the dark about what is happening relationally between humans and the more than human world He has written an accessible work of environmental philosophy with a focus on the ontology of human nature relationships In it he contends that large scale environmental problems are intimate and relational in origin He also challenges the deeply embedded modernist assumptions about the relational limitations of more than human beings ones which place erroneous limitations on the possibilities for human more than human closeness Diverging from the posthumanist literature and its frequent reliance on new materialist ontology the arguments in the book attempt to sweep away what ecofeminists call human nature dualisms In doing so conceptual avenues open up that have the power to radically alter how we engage in our daily interactions with the more than human world all around us Given the diversity of fields and disciplines focused on the human nature relationship the topics of this book vary quite broadly but always converge at the nexus of what is possible between humans and more than human beings The discussion interweaves the influence of human nature dualisms with the limitations of Deleuzian becoming and posthumanism s new materialism and agential realism It leverages interhuman interdependence theory Charles Peirce s synechism of feeling and various treatments of Theory of Mind while exploring the influence of human nature dualisms on sustainability place attachment common worlds pedagogy emergence and critical animal studies It also explores the implications of plant electrical activity plant intelligence and plant neurobiology for possibilities of relational capacities in plants while even grappling with theories of animism to challenge the animate inanimate divide The result is an

engaging novel treatment of human nature relational ontology that will encourage the reader to look at the world in a whole new way     **A Systems Approach to the Environmental Analysis of Pollution Minimization** Sven E.

Jorgensen,2020-01-29 The environmental analysis of pollution problems always involves the use of mass and energy balances to quantify the extent of pollution and its sources This same form of analysis can be applied to ecosystems production systems a whole country or a region A Systems Approach to the Environmental Analysis of Pollution Minimization identifies and describes the common factors shared by these systems The book is organized in twelve chapters and progresses from general concepts to specific assessment methods Chapter one is a general introduction to environmental management principles Chapter two discusses conservation principles and their applications to environmental health Chapters three and four explore ecosystem health properties and analysis Chapters five through eleven present different methods of analysis including Green Accounting Clean Technology Life Cycle Analysis and Risk Assessment Editor Sven Jorgensen closes the book with a sweeping summary Jorgensen is a internationally published authority on the use and analysis of ecosystem models His new book is a comprehensive guide for both students and professionals A Systems Approach to the Environmental Analysis of Pollution Minimization is an invaluable contribution Features     **The Oxford Companion to Global Change**

**Environment and Planning. C, Government & Policy**, 2008 **Human Value, Environmental Ethics and Sustainability** Mark Ryan, 2016-10-03 It is widely acknowledged that we have a duty to protect the environment Yet current environmental policy discussions demonstrate that fulfilling this in practice is a difficult complex and costly task There are many ethical questions arising from such discussions Should we care about the environment because it is economically valuable or because nature has intrinsic value How do we establish an ethical trade off between our current needs and those of future generations Should we protect individual species or entire ecosystems instead What way should we discuss societal values and ideals or should scientific analysis take precedence within decision making practice This book aims to tackle some of these thorny sustainability issues and responds to them with a cohesive original alternative in the form of the precautionary ecosystem health principle PEHP It provides a detailed philosophical approach and advocates that a PEHP approach is able to overcome many of these stark and challenging difficulties within sustainability theory and environmental policy

Conceptions of Value in Environmental Decision-making John O'Neill, Clive L. Spash, Concerted Action on Environmental Valuation in Europe, 2000 This policy briefing series communicates the findings from nine workshops and three plenary meetings under the EVE programme These showed the diversity of research currently being undertaken in the area of environmental values and their policy expression The type of information relevant to the decision process extends from ecological functioning to moral values

**Environment and Planning**, 2008 Publishes interdisciplinary research on issues of Government and Policy with an international perspective Committed to a broad range

of policy questions not just those related to government and public policy Topics covered include nonstate agents private public collaboration and NGOs nongovernmental organisations All areas of economic social and environmental institutions and policy are included Disciplines from which papers are derived include political science planning geography economics law sociology and public administration

**Environmental Challenges to Business** Joel Reichart, Patricia Hogue Werhane, 2000

*Conceptualising and Responding to Complexity* Giuseppe Munda, 2000 This policy briefing series communicates the findings from nine workshops and three plenary meetings under the EVE programme These showed the diversity of research currently being undertaken in the area of environmental values and their policy expression The type of information relevant to the decision process extends from ecological functioning to moral values

Sustainability in Question Jörg Köhn, 1999 This book explores approaches to sustainability by linking the economy society and the environment The international group of experts uses concepts of sustainability from the physical and social sciences to develop a framework for creating policies for sustainability Sustainability in Question goes beyond much of the existing literature on sustainability taking into account culture institutions knowledge and traditions It sheds new light on the ability of humans to create institutional and social arrangements which are able to adapt to changing conditions The authors consider the current state of environmental and institutional sustainability within the context of economic activity and public policy They recognise that some of the basic economic notions such as universal substitutability methodological individualism and the superiority of the price mechanism may be misplaced in the case of environmental protection Sustainability in Question will be welcomed by those interested in environmental economics science management and environmental studies as well as by those working in the fields of ecological economics natural resource economics and environmental sociology
