

HOW TO READ A SAFETY DATA SHEET

OSHA Brief

The most recent version of the Standardized Product Safety Information (SDI) document, Revision 2020, replaces the chemical hazard information, distribution, and exposure control information in the Safety Data Sheet (SDS) required by the Occupational Safety and Health Administration (OSHA) for the workplace. The revised SDSs are designed to better reflect hazard information, health hazards, and control measures associated with the health and environmental conditions of the SDSs.

The SDSs include information such as the properties of each individual chemical, physical, health, and environmental health hazards, protective measures, and safety precautions for handling, storage, and disposal of the chemical. This information is intended to be used in the workplace to help workers understand how to handle the chemical safely. The SDSs must be available to all employees in the workplace, including contractors, and must be updated annually or whenever significant changes are made to the SDSs.

Revised SDSs include hazard classification (Health, Environmental, and Physical), hazard communication, and hazard mitigation information. This information should be helpful to those that must use the SDSs in the workplace. The revised SDSs also include hazard communication information, including hazard statements, hazard categories, and hazard pictograms, as well as hazard information, toxicological information, exposure control information, and other information including the class of information on test results. The SDSs must also include any hazard information that the person who used the SDSs must know to use the information for any required hazard control.

The SDSs must also contain Sections 3 through 10 on the components that the SDS describes, including the composition of the chemical, and listing of all chemicals (SDI), their OSHA hazard categories, and contents of those sections because they determine toxicity, hazard, and other properties.
