Apes Chapter 1 test:

How to Prepare for the AP Environmental Science Exam Bobrow Test Preparation Services, 2002-10-01 This brand new Advanced Placement manual is the only book currently on the market that specifically prepares students for the AP Environmental Science Exam. It reviews all important environmental science concepts and problems including the flow of energy, its sources and conversions, the cycling of matter, geology and earth dynamics, the atmosphere, weather and climate, the biosphere, human history and global distribution, the earth's renewable and nonrenewable resources, measuring environmental quality, global changes and environmental laws, ethics and issues. The book's added features include an overview of the test format and test-taking strategies. Two full-length practice tests are presented with questions answered and explained.

Cognition, Evolution, and Behavior Sara J. Shettleworth, 1998 How do animals perceive the world, learn, remember, search for food or mates, and find their way around? Do any non-human animals count, imitate one another, use a language, or think as we do? What use is cognition in nature, and how might it have evolved? Historically, research on such questions has been fragmented between psychology, where the emphasis has been on theoretical models and lab experiments, and biology, where studies focus on evolution and the adaptive use of perception, learning, and decision making. In the field Cognition, Evolution, and the Study of Behavior integrates research from psychology, behavioral ecology, and ethology in a wide-ranging synthesis of theory and research about animal cognition in the broadest sense, from species-specific adaptations in fish to cognitive mapping in rats and honeybees to theories of mind for chimpanzees. As a major contribution to the emerging discipline of comparative cognition, the book is an invaluable resource for all students and researchers in psychology, zoology, and behavioral neuroscience. It will also interest general readers curious about the details of how and why animals, including humans, process, retain, and use information as they do.

How Animals Think and Feel Ken Cheng, 2016-10-03 This highly accessible book explains key scientific findings in the areas of animal cognition, emotion, and behavior in easy-to-understand language. Why do dogs get separation anxiety? Can a chimpanzee recognize itself in a mirror? Do animals in a zoo get neurotic? Do animals actually have emotions, or are humans simply anthropomorphizing them? *How Animals Think and Feel: An Introduction to Non-Human Psychology* answers these interesting questions and many more in its examination of animal psychology, particularly non-human primates, our closest relatives, and companion animals, the animals with which we spend the most time. Readers will learn about the history of the study of animals, as well as the methodologies and applications of animal research, examples of higher-level thought and problem solving in animals, learning and memory, emotion and basic behaviors such as feeding and mating. Chapters examine specific animal species or groups in greater depth to address particular behaviors and discuss characteristic traits. The book also includes sidebars that offer additional high-interest, ready-reference content, a bibliography of print and electronic sources for further study, and a glossary of unfamiliar terms.
