2014 Examplers For Life Sciences:

Data and Text Processing for Health and Life Sciences Francisco M. Couto, 2019-06-10 This open access book is a step by step introduction on how shell scripting can help solve many of the data processing tasks that Health and Life specialists face everyday with minimal software dependencies The examples presented in the book show how simple command line tools can be used and combined to retrieve data and text from web resources to filter and mine literature and to explore the semantics encoded in biomedical ontologies To store data this book relies on open standard text file formats such as TSV CSV XML and OWL that can be open by any text editor or spreadsheet application The first two chapters Introduction and Resources provide a brief introduction to the shell scripting and describe popular data resources in Health and Life Sciences The third chapter Data Retrieval starts by introducing a common data processing task that involves multiple data resources Then this chapter explains how to automate each step of that task by introducing the required commands line tools one by one The fourth chapter Text Processing shows how to filter and analyze text by using simple string matching techniques and regular expressions The last chapter Semantic Processing shows how XPath queries and shell scripting is able to process complex data such as the graphs used to specify ontologies Besides being almost immutable for more than four decades and being available in most of our personal computers shell scripting is relatively easy to learn by Health and Life specialists as a sequence of independent commands Comprehending them is like conducting a new laboratory protocol by testing and understanding its procedural steps and variables and combining their intermediate results Thus this book is particularly relevant to Health and Life specialists or students that want to easily learn how to process data and text and which in return may facilitate and inspire them to acquire deeper bioinformatics skills in the future

[Dual-use life science research and biosecurity in the 21st Century: Social, Technical, Policy, and Ethical Challenges](#) Jonathan E. Suk, Kathleen M. Vogel, Amanda Jane Ozin, 2015-06-04 In September 2011 scientists announced new experimental findings that would not only threaten the conduct and publication of influenza research but would have significant policy and intelligence implications The findings presented a modified variant of the H5N1 avian influenza virus hereafter referred to as the H5N1 virus that was transmissible via aerosol between ferrets These results suggested a worrisome possibility the existence of a new airborne and highly lethal H5N1 virus that could cause a deadly global pandemic In response a series of international discussions on the nature of dual use life science arose These discussions addressed the complex social technical political security and ethical issues related to dual use research This Research Topic will be devoted to contributions that explore this matrix of issues from a variety of case study and international perspectives

[Visuospatial Processing for Education in Health and Natural Sciences](#) Juan C. Castro-Alonso, 2019-08-05 Visuospatial processing is key to learn and perform professionally in the domains of health and natural sciences As such there is accumulating research showing the importance of visuospatial processing for education in diverse health sciences e g medicine anatomy surgery and

in many natural sciences e g biology chemistry physics geology In general visuospatial processing is treated separately as a spatial ability and b working memory with visuospatial stimuli This book attempts to link these two research perspectives and present visuospatial processing as the cognitive activity of two components of working memory mostly the visuospatial sketch pad and also the central executive which allows to perform in both spatial ability and working memory tasks Focusing on university education in the fields of health sciences and natural sciences the chapters in this book describe the abilities of mental rotation mental folding spatial working memory visual working memory among others and how different variables affect them Some of these variables thoroughly addressed in the book are sex gender visualizations interactivity cognitive load and embodiment The book concludes with a chapter presenting VAR a battery of computer based tests to measure different tasks entailing visuospatial processing With contributions by top educational psychologists from around the globe this book will be of interest to a broad array of readers across the disciplines

Perspectives on Environmental Law Scholarship

Ole W. Pedersen,2018-11-08 Presents the first comprehensive reflection on the nature of environmental law scholarship from the perspectives of leading scholars in the field

The Routledge Handbook of the Political Economy of Science David Tyfield,Rebecca Lave,Samuel Randalls,Charles Thorpe,2017-04-28 The political economy of research and innovation R I is one of the central issues of the early twenty first century Science and innovation are increasingly tasked with driving and reshaping a troubled global economy while also tackling multiple overlapping global challenges such as climate change or food security global pandemics or energy security But responding to these demands is made more complicated because R I themselves are changing Today new global patterns of R I are transforming the very structures institutions and processes of science and innovation and with it their claims about desirable futures Our understanding of R I needs to change accordingly Responding to this new urgency and uncertainty this handbook presents a pioneering selection of the growing body of literature that has emerged in recent years at the intersection of science and technology studies and political economy The central task for this research has been to expose important but consequential misconceptions about the political economy of R I and to build more insightful approaches This volume therefore explores the complex interrelations between R I both in general and in specific fields and political economies across a number of key dimensions from health to environment and universities to the military The Routledge Handbook of the Political Economy of Science offers a unique collection of texts across a range of issues in this burgeoning and important field from a global selection of top scholars The handbook is essential reading for students interested in the political economy of science technology and innovation It also presents succinct and insightful summaries of the state of the art for more advanced scholars

Critical Role of Animal Science Research in Food Security and Sustainability National Research Council, Division on Earth and Life Sciences, Board on Agriculture and Natural Resources, Policy and Global Affairs, Science and Technology for Sustainability Program, Committee on Considerations for the Future of Animal Science Research, 2015-03-31

By 2050 the world's population is projected to grow by one third reaching between 9 and 10 billion. With globalization and expected growth in global affluence a substantial increase in per capita meat, dairy and fish consumption is also anticipated. The demand for calories from animal products will nearly double highlighting the critical importance of the world's animal agriculture system. Meeting the nutritional needs of this population and its demand for animal products will require a significant investment of resources as well as policy changes that are supportive of agricultural production. Ensuring sustainable agricultural growth will be essential to addressing this global challenge to food security.

Critical Role of Animal Science Research in Food Security and Sustainability identifies areas of research and development, technology and resource needs for research in the field of animal agriculture both nationally and internationally. This report assesses the global demand for products of animal origin in 2050 within the framework of ensuring global food security. It evaluates how climate change and natural resource constraints may impact the ability to meet future global demand for animal products in sustainable production systems and identifies factors that may impact the ability of the United States to meet demand for animal products including the need for trained human capital, product safety and quality, and effective communication and adoption of new knowledge, information and technologies. The agricultural sector worldwide faces numerous daunting challenges that will require innovations, new technologies and new ways of approaching agriculture if the food, feed and fiber needs of the global population are to be met. The recommendations of Critical Role of Animal Science Research in Food Security and Sustainability will inform a new roadmap for animal science research to meet the challenges of sustainable animal production in the 21st century.
