**Current Signature Analysis for Condition Monitoring of Cage Induction Motors** William T. Thomson, Ian Culbert, 2017-01-24 Provides coverage of Motor Current Signature Analysis MCSA for cage induction motors. This book is primarily for industrial engineers. It has 13 chapters and contains a unique data base of 50 industrial case histories on the application of MCSA to diagnose broken rotor bars or unacceptable levels of airgap eccentricity in cage induction motors with ratings from 127 kW 170 H P up to 10 160 kW 13 620 H P. There are also unsuccessful case histories which is another unique feature of the book. The case studies also illustrate the effects of mechanical load dynamics downstream of the motor on the interpretation of current signatures. A number of cases are presented where abnormal operation of the driven load was diagnosed. Chapter 13 presents a critical appraisal of MCSA including successes failures and lessons learned via industrial case histories. The case histories are presented in a step by step format with predictions and outcomes supported by current spectra and photographic evidence to confirm a correct or incorrect diagnosis. The case histories are presented in detail so readers fully understand the diagnosis. The authors have 108 years of combined experience in the installation maintenance repair design manufacture operation and condition monitoring of SCIMs. There are 10 questions at the end of chapters 1 to 12 and answers can be obtained via the publisher Current Signature Analysis for Condition Monitoring of Cage Induction Motors. This book serves as a reference for professional engineers head electricians and technicians working with induction motors.
