Section/Table/Figure: Section 4.7.2.2.1

Question: Section 4.7.2.2.1, "NOTE: Test results may be used to qualify other blind rams and other fixed bore pipe rams of different nominal pipe sizes, ..." I interpret this statement as saying that testing a fixed bore pipe ram of a particular pipe size will qualify other fixed bore pipe rams of different nominal pipe sizes as long as the relevant criteria is met. But I don't see any explicit statement that says "Fixed bore pipe rams test qualifies blind rams"?

Response: No. Both must be tested. In other words, a pipe ram test does not qualify a blind ram. As indicated in Table 20, blind rams must be tested for sealing characteristics, fatigue and temperature. It is important to note the restrictions following Table 19 (bottom of page 43). For example, the change of any essential variable prohibits using the qualification of a different product. API 16A, Section 4.5.5 lists metallic insert design and mold design as essential variables.

Section/Table/Figure: Section 5.3.2.2

Question: The sentences in question read "The number and location of both part and environmental thermocouples (with controlling and monitoring designations) SHALL be clearly identified. Thermocouples attached to the parts SHALL be used as controlling thermocouples. A minimum of two part thermocouples are required per heat treat batch." There are two clear SHALL statements, but the last statement that "a minimum of two part thermocouples are required" is not a SHALL statement. Can you confirm the requirement for the number of thermocouples required?

Response: Yes. Per the API Style Guide, Table 1, equivalent expressions for statements of requirement that may be in a document include (but are not limited to) the use of "is required" or any variation. The extracted wording "A minimum of two part thermocouples are required per heat treat batch." would clearly meet this criterion and therefore is deemed a requirement.

Section/Table/Figure: Section 5.3.5.2.3

Question: In section 5.3.5.2.3, figure 9, the second to last note ends with "...ER = 1 - 1/4 T". All other fractions in the document are shown WITHOUT the dash between unit and fraction, so it is unclear if this is a fraction or a formula, where the dash indicates subtraction. In 3rd edition, this value was one fourth (0.25). Is the ER equal to one minus one fourth (equal to 0.75), or is it one and one fourth (equal to 1.25)?

Response: No. The ER does not equal one minus one fourth T;   **Yes.** The ER equals one and one fourth T (equal to 1.25T).

Section/Table/Figure: Section 5.3.5.2.3

Question: In 16A 3rd edition, in section 6.3.5.5, figure 8.b, there is a statement which reads "When all internal and external surfaces during heat treatment are not within 13mm (1/2 in) of the final surfaces, then ER = 2T." Due to the heat treating process, bolt holes and porting (which may be considered internal or external surfaces) are machined AFTER the process, which means the ER requirement becomes 2T. In 3rd edition, there was a further statement in section 6.3.5.2.3 which limited the maximum QTC ER to 5 inches. In 4th edition, the limitation of the ER to 5 inches has been removed (section 5.3.5.2.3), yet the
