Emphasis is on a risk based approach to restoration that achieves effective cost efficient restoration practices. The introduction provides an overview of slope stability factors erosion and sedimentation risks in the context of hill slope restoration. Section 2 describes procedure for identifying watershed restoration priorities building assessing an inventory of areas requiring treatment and developing a restoration plan. This is followed by sections on field assessments restoration treatments for road deactivation landslide gully rehabilitation and soil bioengineering for slope stability. The final section suggests procedures for preparing detailed assessment prescription reports planning implementing major works and evaluating the effectiveness of a restoration project.
