## Unit 3 Study Guide

Directions: Answer each of the following questions on a **SEPARATE** piece of paper. An answer key will be provided online but we will not go over the answers before the designated study day. If you would like help or have any questions outside of that time, please schedule time with me.

- What are the 2 ways electric charges interact?  
a) same charges repel  
b) opposite charges attract
- What is an electric field?  
The attraction or repulsion between electric charges.
- How are electric charges a force?  
They can push or pull (depending if they are the same or opposite)
- Who gave the names positive and negative to electric charges?  
Ben Franklin
- Draw a picture of the 4 different electric field diagrams.

- How is distance related to electric force?  
Greater distance = weaker force
- Define static electricity.  
The build-up of charges on an object.
- Give an example of the 3 methods for transferring charges for static electricity.  
a) Friction: Rub socks on carpet to transfer electrons to socks  
b) Conduction: Electrons transfer from socks to feet, and up to your finger from direct contact  
c) Induction: The electrons on your finger repel the electrons on a doorknob to make the doorknob positively charged. The electrons jump from your finger to the doorknob causing a spark.
- Explain how lightning works.  
Lightning is form of static discharge. Wind rubs (friction) against clouds and makes the clouds negatively charged. Cloud induce a positive charge on the ground by repelling the electrons in the ground. Electrons from the cloud jump to the positively charged ground causing a spark (lightning).
- Why does static discharge occur?  
Objects want to be neutral
- Define electric current.  
The continuous flow of electric charged through a material.
- Draw an open circuit and a closed circuit. Be sure to include AND LABEL wires, a battery, and a light bulb.

- Define conductor and insulator.  
Conductors transfer electric charge well. Insulators do not transfer electric charge well.
- Give 4 examples of conductors and 4 examples of insulators.  
Conductors: Aluminum foil, paper clip, copper wire, metal on a pencil
