potential of the metaverse as a new educational environment offering immersive experiences and enhanced social communication. However, the book also addresses potential challenges such as weak social connections, privacy concerns, and the risk of crimes due to anonymity in virtual spaces. We emphasize the importance of carefully analyzing how students understand the metaverse and designing classes that encourage creative problem solving and collaboration. Using the Metaverse in Education: A Practical Guide is a comprehensive resource for educators looking to harness the metaverse's potential while mitigating its challenges.

**Aircraft Take-off Performance and Risks for Wet and Contaminated Runways in Canada** David C. Biggs, Transportation Development Centre (Canada), 1991. This report documents the results of a study into the risks associated with degraded performance during rejected and continued take off from wet and contaminated runways. A comprehensive review of world-wide accident and incident data was undertaken to identify the severity of the problem and the factors involved. Runway condition characteristics, the correlation of runway friction test devices with the friction experienced by aeroplanes, and take off performance estimation on wet and contaminated runways were reviewed. Performance estimates were examined on the basis of the ratio of contaminated vs dry friction. A method is outlined for classifying runway conditions based upon ICAO SARPS, FAA, NASA trials, and the practices of leading countries and airlines. The frequency of wet and contaminated runways in Canada, the likelihood of critical events on the take off run, and the take off weight distribution were determined. These frequency and probability distributions and runway weather and aircraft performance data were used in a probabilistic analysis of the risk of take off accidents. A number of counter measures were examined, including the JAR acceptable means of compliance for wet and contaminated runways. *Boeing 737-100/200 Main Wheel Assembly*, 1992.
