Toxicogenomics in non-mammalian species Stephen Sturzenbaum, Michael Aschner, Jonathan Freedman, Some molecules or conditions are exclusively toxic to biological systems and classified as being non essential others are essential for life. Nevertheless above certain threshold even the essential will become toxic. Tightly controlled homeostatic control mechanisms are thus vital drivers of well being, longevity and survival. The identification and characterization of these intricate pathways form the foundations of Toxicogenomics. The initiation and indeed completion of numerous non mammalian genome sequencing projects has driven the exponential growth of available genetic sequences. Collating this vast amount of data into functional and mechanistically meaningful units will provide novel insights into pathogenesis, new methods of risk assessment, genetic risk modifications in preventative medicine and new therapeutic targets for pharmaceutical and biological medicines. This Research Topic issue will explore the current knowledgebase pertaining to the multitude of genomic and toxicological tools within non mammalian organisms. The encyclopaedic coverage will span the full taxonomic breadth ranging from simple unicellular bacteria and yeast to complex creatures such as birds and fish. The resulting collection of unique complimentary or indeed contrasting approaches, tools and technologies which are defined by the availability and feasibility for each organism to study genomics of xenobiotic or stress biology will not only foster cross phyla awareness but expand the horizon of Toxicogenomics.

Symposium, International Astronomical Union, 2006-04-27 An up to date survey of astrochemistry in the early years of the twenty first century. For researchers and graduate students. Cancer Metastasis David Lyden, Danny R. Welch, Bethan Psaila, 2011-04-25 Metastasis is responsible for a large burden of morbidity and mortality among cancer patients and currently few therapies specifically target metastatic disease. Further scientific dissection of the underlying pathways is required to pave the way for new therapeutic targets. This groundbreaking new text comprehensively covers the processes underlying cancer metastasis and the clinical treatment of metastatic disease. Whereas previous volumes have been compendia of laboratory research articles, the internationally renowned authors of this volume have summarized the state of the art research in the metastasis field. A major section covers the cellular and molecular pathways of metastasis and experimental techniques and the systems and models applied in this field. Subsequently the clinical aspects of the major cancer types are considered, focusing on disease specific research and therapeutic approaches to metastatic disease. The

focus is on novel pathophysiological insights and emerging therapies future directions for research and unmet clinical needs are also discussed *Index Medicus*, 2002 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings
