Targeting Maths Katy Pike, Judy Tertini, Garda Turner, 2004 Targeting Maths for Victoria Judy Tertini, 2006

Make: Geometry Joan Horvath, Rich Cameron, 2021-06-28 Geometry of all the branches of mathematics is the one that is most easily visualized by making something. However it is all too easy to reduce it to reams of formulas to memorize and proofs to replicate. This book aims to take geometry back to its practical roots with 3D printed models and puzzles as well as demonstrations with household objects like flashlights and paper towel tubes. This is not a traditional geometry textbook but rather builds up understanding of geometry concepts while also bringing in elements of concepts normally learned much later. Some of the models are counterintuitive and figuring out how and why they work will both entertain and give insights. Two final chapters suggesting open ended projects in astronomy and physics and art and architecture allow for deeper understanding and integration of the learning in the rest of the book. *Queensland Targeting Maths: Teaching guide* Judy Tertini, Katy Pike, 2004 Geometry Teacher's Activities Kit Judith A. Muschla, Gary Robert Muschla, 2000-04-12 For all math teachers in grades 6-12 this practical resource provides 130 detailed lessons with reproducible worksheets to help students understand geometry concepts and recognize and interpret geometry's relationship to the real world. The lessons and worksheets are organized into seven sections each covering one major area of geometry and presented in an easy to follow format including title focusing on a specific topic, skill learning objective, special materials if any, teaching notes with step by step directions, answer key and reproducible student activity sheets. Activities in sections 1-6 are presented in order of difficulty within each section while those in Part 7 A Potpourri of Geometry are open ended and may be used with most middle and high school classes. Many activities throughout the book may be used with calculators and computers in line with the NCTM's recommendations. **Mathematics Through Play in the Early Years** Kate Tucker, 2010-03-18 Teaching mathematics to young children in creative ways is made easy with this second edition of a wonderful book which offers the reader clear advice and lots of exciting ideas to use in any early years setting. By showing how to introduce mathematical concepts through play based activities this book is in tune with current thinking about best practice in teaching and with the requirements of the Early Years Foundation Stage and current Primary National Strategy. New material includes an additional chapter on creative recording, a whole new chapter on ways to involve parents, discussion of policy throughout the UK, more on using ICT, case studies covering the whole birth to eight age range. Essential reading for any practitioner who wants to develop their mathematics teaching. This book is equally important for all trainee teachers and early years students. Kate Tucker is an early years teacher trainer and writer based in Exeter. She has over 20 years of experience and has written widely on early years mathematics and Foundation Stage practice.
