## Parallel and Perpendicular Lines

K

### 3-4

1. A developer is planning a new housing complex. The map of the complex is shown at the right. Assume that all streets lie in a plane.

- a. If Washington and Lincoln Streets are to be parallel, what must be true of  $\angle 1$  and  $\angle 2$ ?
- b. Which streets must be parallel if  $\angle 3 = \angle 4$ ? Justify your answer.
- a. If  $m\angle 1 = 90$  and your answers to parts (a) and (b) are true, to what roads is Eagle Road perpendicular?

2. **Developing Proof** Copy and complete this paragraph proof of the Perpendicular Transversal Theorem (Theorem 3-9).

Given: In a plane,  $x \perp y$  and  $y \parallel z$ .

Prove:  $x \perp z$

Since  $y \parallel z$ ,  $m\angle 1 = \underline{\hspace{1cm}}$  by the  $\underline{\hspace{1cm}}$ .

By the definition of  $\underline{\hspace{1cm}}$  lines,  $x \perp \underline{\hspace{1cm}}$ .

The following statements describe the rungs and posts that form the back of a chair. Assume that the rungs and posts all lie in a plane. Based only on the statements, make a conclusion about the rungs, one post, or both posts of the chair back. Explain.

5. The rungs are parallel and the top one is perpendicular to the left post.
6. The right post is perpendicular to all the rungs.
7. The rungs are parallel. The last rung is perpendicular to the right post and the first rung is perpendicular to the left post.

*Program Development in Computational Logic* Maurice Bruynooghe, Kung-Kiu Lau, 2004-06-17 1 The tenth anniversary of the LOPSTR symposium provided the incentive for this volume LOPSTR started in 1991 as a workshop on logic program synthesis and transformation but later it broadened its scope to logic based program development in general that is program development in computational logic and hence the title of this volume The motivating force behind LOPSTR has been the belief that declarative paradigms such as logic programming are better suited to program development tasks than traditional non declarative ones such as the imperative paradigm Specification synthesis transformation or specialization analysis debugging and verification can all be given logical foundations thus providing a unifying framework for the whole development process In the past 10 years or so such a theoretical framework has indeed begun to emerge Even tools have been implemented for analysis verification and specialization However

it is fair to say that so far the focus has largely been on programming in the small So the future challenge is to apply or extend these techniques to programming in the large in order to tackle software engineering in the real world Returning to this volume our aim is to present a collection of papers that reflect significant research efforts over the past 10 years These papers cover the whole development process specification synthesis analysis transformation and specialization as well as semantics and systems

Foundations of Algebraic Specification and Formal Software Development Donald Sannella, Andrzej Tarlecki, 2012-01-05 This book provides foundations for software specification and formal software development from the perspective of work on algebraic specification concentrating on developing basic concepts and studying their fundamental properties These foundations are built on a solid mathematical basis using elements of universal algebra category theory and logic and this mathematical toolbox provides a convenient language for precisely formulating

the concepts involved in software specification and development Once formally defined these notions become subject to mathematical investigation and this interplay between mathematics and software engineering yields results that are mathematically interesting conceptually revealing and practically useful The theory presented by the authors has its origins in work on algebraic specifications that started in the early 1970s and their treatment is comprehensive This book contains five kinds of material the requisite mathematical foundations traditional algebraic specifications elements of the theory of institutions formal specification and development and proof methods While the book is self contained mathematical maturity and familiarity with the problems of software engineering is required and in the examples that directly relate to programming the authors assume acquaintance with the concepts of functional programming The book will be of value to researchers and advanced graduate students in the areas of programming and theoretical computer science
