*A Tight, Practical Integration of Relations and Functions* Harold Boley, 1999-09-29 As in other fields in computer science certain objects of study can be synthesized from different basic elements in different ways and with different resulting stabilities In subfields such as artificial intelligence computational logic and programming languages various relational and functional ingredients and techniques have been tried for the synthesis of declarative programs This text considers the notions of relations as found in logic programming or in relational databases and of functions as found in functional programming or in equational languages We study a declarative integration which is tight because it takes place right at the level of these notions and which is still practical because it preserves the advantages of the widely used relational and functional languages PROLOG and LISP The resulting relational and functional language RELFUN is used here for exemplifying all integration principles *Marine Navigation and Safety of Sea Transportation* Adam Weintrit, 2013-06-05 The TransNav 2013 Symposium held at the Gdynia Maritime University Poland in June 2013 has brought together a wide range of participants from all over the world The program has offered a variety of contributions allowing to look at many aspects of the navigational safety from various different points of view Topics presented and discussed at the Symposium were navigation safety at sea sea transportation education of navigators and simulator based training sea traffic engineering ship's manoeuvrability integrated systems electronic charts systems satellite radio navigation and anti collision systems and many others This book is part of a series of four volumes and provides an overview of Problems in Marine Navigation and is addressed to scientists and professionals involved in research and development of navigation safety of navigation and sea transportation **The Semantic Foundations of Logic Volume 1: Propositional Logics** R.L. Epstein, 2013-11-11 This book grew out of my confusion If logic is objective how can there be so many logics Is there one right logic or many right ones Is there some underlying unity that connects them What is the significance of the mathematical theorems about logic which I've learned if they have no connection to our everyday reasoning The answers I propose revolve around the perception that what one pays attention to in reasoning determines which logic is appropriate The act of abstracting from our reasoning in our usual language is the stepping stone from reasoned argument to logic We cannot take this step alone for we reason together logic is reasoning which has some objective value For you to understand my answers or perhaps better conjectures I have retraced my steps from the concrete to the abstract from examples to general theory to further confirming examples to reflections on the significance of the work *Russian Mathematical Surveys*, 1992 **Monthly Catalogue, United States Public Documents**, 1994-10 *Monthly Catalog of United States Government Publications*, 1994 **Proceedings of the Eleventh Amsterdam Colloquium** Universiteit van Amsterdam. Instituut voor Taal, Logica en Informatie. Amsterdam Colloquium, 1997 *Theories, Sites, Toposes* Olivia Caramello, 2018-01-19 According to Grothendieck the notion of topos is the bed or deep river where come to be married geometry and algebra topology and

arithmetic mathematical logic and category theory the world of the continuous and that of discontinuous or discrete structures It is what he had conceived of most broad to perceive with finesse by the same language rich of geometric resonances an essence which is common to situations most distant from each other coming from one region or another of the vast universe of mathematical things The aim of this book is to present a theory and a number of techniques which allow to give substance to Grothendieck's vision by building on the notion of classifying topos educated by categorical logicians Mathematical theories formalized within first order logic give rise to geometric objects called sites the passage from sites to their associated toposes embodies the passage from the logical presentation of theories to their mathematical content i.e. from syntax to semantics The essential ambiguity given by the fact that any topos is associated in general with an infinite number of theories or different sites allows to study the relations between different theories and hence the theories themselves by using toposes as bridges between these different presentations The expression or calculation of invariants of toposes in terms of the theories associated with them or their sites of definition generates a great number of results and notions varying according to the different types of presentation giving rise to a veritable mathematical morphogenesis

**Constitutions of Value** Isabel Feichtner, Geoff Gordon, 2023-01-19 Gathering an interdisciplinary range of cutting edge scholars this book addresses legal constitutions of value Global value production and transnational value practices that rely on exploitation and extraction have left us with toxic commons and a damaged planet Against this situation the book examines law's fundamental role in institutions of value production and valuation Utilizing pathbreaking theoretical approaches it problematizes mainstream efforts to redeem institutions of value production by recoupling them with progressive values Aiming beyond radical critique the book opens up the possibility of imagining and enacting new and different value practices This wide ranging and accessible book will appeal to international lawyers socio legal scholars those working at the intersections of law and economy and others in politics economics environmental studies and elsewhere who are concerned with rethinking our current ideas of what has value what does not and whether and how value may be revalued The Open Access version of this book available at [www.taylorfrancis.com](http://www.taylorfrancis.com) has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license      FMSE '05 Ralf Küsters, 2005      **Mathematical**
