## ANSWER: Multiple Choice: 100% (A, B, C, D, E)

Multiple Choice: You may have observed changes in a radioactive atom because atoms of radioactive elements are undergoing "radioactive decay." Radioactive decay is the process by which radioactive atoms, with radioactive dating ("radio" and "decay" indicate the process) lose energy until they become non-radioactive. This process can take millions of years for some atoms like carbon-14, but for others like cesium-137, it can take only a few thousand years.
