Dynamic Probabilistic Systems, Volume I Ronald A. Howard, 2012-05-04 This book is an integrated work published in two volumes The first volume treats the basic Markov process and its variants the second semi Markov and decision processes Its intent is to equip readers to formulate analyze and evaluate simple and advanced Markov models of systems ranging from genetics and space engineering to marketing More than a collection of techniques it constitutes a guide to the consistent application of the fundamental principles of probability and linear system theory Author Ronald A Howard Professor of Management Science and Engineering at Stanford University begins with the basic Markov model proceeding to systems analyses of linear processes and Markov processes transient Markov processes and Markov process statistics and statistics and inference Subsequent chapters explore recurrent events and random walks Markovian population models and time varying Markov processes Volume I concludes with a pair of helpful indexes [Dynamic Probabilistic Systems: Markov models](#)

Managers James J. Solberg, 2008-12-22 *Modeling Random Processes for Engineers and Managers* provides students with a gentle introduction to stochastic processes emphasizing full explanations and many examples rather than formal mathematical theorems and proofs The text offers an accessible entry into a very useful and versatile set of tools for dealing with uncertainty and variation Many practical examples of models as well as complete explanations of the thought process required to create them motivate the presentation of the computational methods In addition the text contains a previously

unpublished computational approach to solving many of the equations that occur in Markov processes Modeling Random Processes is intended to serve as an introduction but more advanced students can use the case studies and problems to expand their understanding of practical uses of the theory Malicious Deceivers Ioana B. Jucan, 2023-08-08 In *Malicious Deceivers* Ioana B Jucan traces a genealogy of post truth intimately tied to globalizing modernity and connects the production of repeatable fakeness with capitalism and Cartesian metaphysics Through case studies that cross times and geographies the book unpacks the notion of fakeness through the related logics of dissimulation deception and simulation performativity as seen with software AI television plastics and the internet Specifically Jucan shows how these dis simulation machines and performative objects construct impoverished pictures of the world ensuring a repeatable sameness through processes of hollowing out embodied histories and lived experience Through both its methodology and its subjects objects of study the book further seeks ways to counter the abstracting mode of thinking and the processes of voiding performed by the twinning of Cartesian metaphysics and global capitalism Enacting a model of creative scholarship rooted in the tradition of writing as performance Jucan a multimedia performance maker and theater director uses the embodied I as a framing and situating device for the book and its sites of investigation In this way she aims to counter the Cartesian voiding of the thinking I and to enact a different kind of relationship between self and world from the one posited by Descartes and replayed in much Western philosophical and more broadly academic writing a relationship of separation that situates the I on a pedestal of abstraction that voids it of its embodied histories and fails to account for its positionality within a socio historical context and the operations of power that define it *Fuzzy Rule-Based Expert Systems and Genetic Machine Learning* Andreas Geyer-Schulz, 1997 This book integrates fuzzy rule languages with genetic algorithms genetic programming and classifier systems with the goal of obtaining fuzzy rule based expert systems with learning capabilities The main topics are first introduced by solving small problems then a prototype implementation of the algorithm is explained and last but not least the theoretical foundations are given The second edition takes into account the rapid progress in the application of fuzzy genetic algorithms with a survey of recent developments in the field The chapter on genetic programming has been revised An exact uniform initialization algorithm replaces the heuristic presented in the first edition A new method of abstraction compound derivations is introduced *Integer Programming* Robert Garfinkel, George L.
