

# Safe Manual Handling of Pallets

Stacking Pallets

Unstacking Pallets

Wooden pallets weight between 23-45kg.

The hazards of pallet handling inclue wood splinters, hitting the hands, feet and lower leg together with back and shoulder strain.

Pallets are normally taken from the stack by sliding. The higher the stack, the greater the likelihood of injury.

**Whenever the pallets are stacked and unstacked, if possible, a forklift should be used.**

If this is not possible then 2 people should move the pallet particularly when stacking.

The following guidelines should be followed for the handling of pallets:

- ☒ Individuals should not stack pallets more than 6ft high.
- ☒ Individuals should not unstack pallets from stacks greater than 8 pallets high.
- ☒ If a 2nd person is available, pallets can be stacked and unstacked to 8 high.
- ☒ Pallets should always be placed right side up and the wood grain aligned for easy sliding.
- ☒ Maintain control of the pallet all through the handling and be aware of possible hand injuries through splinters.
