Rangelands of the Arid and Semi-arid Zones in Uzbekistan Gustave Gintzburger,2003 This abundantly illustrated book presents a panorama of the biodiversity, climatology and flora of the arid zones of Uzbekistan and describes around 150 dominant range species with their ecology, utilization and range rehabilitation techniques. It should contribute to a better understanding of these little known arid zones of Central Asia and to the conservation and rational use of their fragile natural resources

Sown Winter Ranges in the Foothill Deserts of Soviet Central Asia Nina Trofimovna Nechaeva, Sergei I^UA^Ukovlevich Prikhod'ko, 1968

Proceedings--Symposium on Cheatgrass Invasion, Shrub Die-off and Other Aspects of Shrub Biology and Management, 1990 *Grazing in Future Multi-scapes: From Thoughtscapes to Landscapes, Creating Health from the Ground Up* Pablo Gregorini, Iain James Gordon, Carol Kerven, Fred Provenza, 2022-09-27 This Research Topic is hosted in partnership with the Grazing in Future Multi Scapes international workshop. The workshop will be held online 30th May 5th June 2021. Throughout different landscapes of the world grazing herbivores fulfill essential roles in ecology, agriculture, economies and cultures including families, farms and communities. Not only do livestock provide food and wealth, they also deliver ecosystem services through the roles they play in environmental composition, structure and dynamics. Grazing as a descriptive adjective locates herbivores within a spatial and temporal pastoral context where they naturally graze or are grazed by farmers, ranchers, shepherds etc. In many cases, however, pastoralism with the single objective of maximizing animal production and/or profit has transformed landscapes, diminishing biodiversity, reducing water and air quality, accelerating loss of soil and plant biomass, and displacing indigenous animals and people. These degenerative landscape transformations have jeopardized present and future ecosystem and societal services, breaking the natural integration of land, water, air, health, society and culture. Land users, policy makers and societies are calling for alternative approaches to pastoral systems, a call for diversified, adaptive and integrative agro-ecological and food pastoral systems designs that operate across multiple scales and scapes e.g. thought, social, land, food, health, wild, scapes simultaneously. There needs to be a paradigm shift in pastoral production systems and

how grazing herbivores are managed grazed within them derived initially from a change in perception of how they provide wealth The thoughtscapes will include paradigm shifts where grazers move away from the actual archetype of pastoralism future landscapes are re imagined and regenerative and sustainable management paradigms are put in place to achieve these visions From this will come a change in collective thinking of how communities and cultures socialscapes perceive their relationships with pastoral lands The landscapes are the biotic and abiotic four dimensional domains or environments in need of nurture Landscapes are the tables where humans and herbivores gain their nourishment i e foodscapes Foodscapes and dietary perceptions dictate actions and reactions that are changing as developed countries grapple with diseases related to obesity and people starve in developing countries Societies are demanding healthscapes and nutraceutical foodscapes and paradoxically some are moving away from animal products While indigenous species of animals including humans wildscapes have been displaced from many of their lands by monotonic pastoralism multifunctional pastoral systems can be designed in view of dynamic multi scapes of the future The purpose of this Research Topic is to influence future mental and practical models of pastoralism in continually evolving multi scapes We seek a collection of papers that will cultivate such a shift in thinking towards future models of sustainable multipurpose pastoralism The contributions will be synthesized to establish how multifunctional pastoral systems can be re imagined and then designed in view of the integrative dynamics of sustainable future multi scapes

Sustainable Land Management in Greater Central Asia Victor Squires,Lu Qi,2017-09-22
Greater Central Asia encompasses a vast area that includes deserts natural grasslands steppes shrublands and alpine regions Many of these land types are degraded and productivity is falling at a time when human populations and livestock inventories are on the rise Ecosystem stability and biodiversity are under threat and there is an urgent need to develop more sustainable land management regimes This book uses an integrated regional approach to provide a comprehensive exploration of sustainable land development in Central Asia An interdisciplinary team of experts analyses the economic ecological sociological technological and political factors surrounding sustainable land and water management in the region sharing potential problems and solutions As international concern about desertification grows the book concludes by asking how the region is likely to develop in the future This book will be of value to scholars students policy makers and NGOs with an interest in sustainable development in Central Asia
