

Appendectomy (Open, Laparoscopic)

Patient Discharge Instructions

Day after Surgery

You should

- If you have strips of tape [Steri-strips®] on the incisions: remove the bandage but leave the strips of tape directly on the skin for a week; no other dressing is necessary.
- If you have sutures or staples, you may wish to keep a dressing on to protect the incision. Change the dressing and inspect your wound every day and as needed.
- Shower or bathe, but do not soak in a bathtub until 1 week after surgery. You may use a mild soap to gently cleanse your incision and carefully pat dry.

General Instructions

Medications

- It is normal to have pain at your incision sites. You will receive a prescription for pain medicine before you leave the hospital. You may need to take this pain medication regularly, as directed, for the first few days after you leave the hospital. This should help control your pain, allow you to be more active and speed up your recovery.
- Acetaminophen [Tylenol] or ibuprofen [Motrin] 1-2 tablets every 4-6 hours for mild or moderate discomfort
- Acetaminophen with hydrocodone [Vicodin] or Percocet for severe discomfort. Avoid alcoholic beverages while taking these narcotics. DO NOT drive while on these pills.

Wounds

- A few spots of blood on the bandage is common. Call your surgeon if there are other signs of bleeding.
- A moderate amount of black and blue skin discoloration around the wounds is common.
- A firm, tender swelling will develop beneath the incision(s). These will disappear after several weeks.
Support the lower abdomen with a small pillow when coughing or sneezing.

Diet

- Try to drink several glasses of juice or water per day.
- You may eat a normal diet as tolerated.
- Occasionally, patients develop constipation after surgery due to inactivity and narcotic pain medicine. Constipation may be relieved by increasing fluid intake and by taking an over-the-counter stool softener or mild laxative (milk

Appendectomy Post Op Instructions
