Subtract measure "B" from measure "A". Note this result "C".

A - B = C

Remove ring gear carrier then install pinion gear into housing.

Measure distance between mounting surface and the pinion shim surface. This is measure "D".

Remove pinion gear then measure the distance between mount surface and bearing surface. This is measure "E".

Subtract measure "E" from measure "D". Note this result "F".

D - E = F

The difference between result "F" and result "C" is the pinion shims thickness.

F - C = Pinion shims thickness.

Determine the appropriate pinion shim using the following pinion gear shim kit (P/N 703 500 049).

| THICKNESS	NOTCHES
0.25 mm (.010 in)	0
0.38 mm (.015 in)	1
0.51 mm (.020 in)	2
0.64 mm (.025 in)	4

Install pinion, shims, bearing and pinion nut. Apply Loctite 243 to nut and torque to 98 N•m (72 lbf•ft).

Check if pinion gear teeth and ring gear teeth are equal.

After pinion installation, center ring gear carrier.

Take the half housing with pinion gear. Measure distance between housing edge and the inner ring of bearing. This is measure "G".

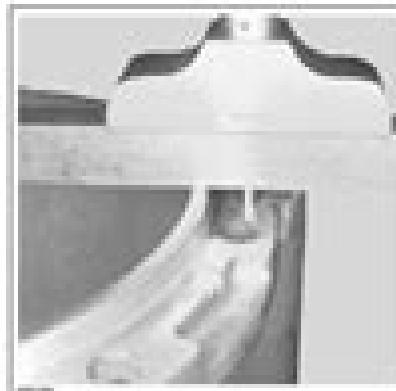

Measure the other half housing between housing edge and the inner ring of bearing. This is measure "H".

Measure the edge of half housing. This is measure "J".

Take the same distance to the other end. This is measure "N".

Subtract the measure "J" from measure "H" then add this result to "G". Note this result "K".

G + (H - J) = K (housing inside length)

Measure ring gear carrier length. This is measure "L".

Measure the distance between the end of ring gear carrier and the bearing shoulder. Note this measure "M".

Add measure "M" from measure "N". Subtract this result from measure "L". Note this result "P".

The result "P" is the length of ring gear carrier between bearings.

L - (M + N) = P

Subtract result "P" from result "K". At this measure subtract the clearance 0.127 mm (.005 in). This is the shim thickness.

K - P = X - 0.127 mm (.005 in) = shim thickness.
