#### 4 Grand Prix Problems:

**The Millennium Prize Problems** James Carlson, Arthur Jaffe, Andrew Wiles, 2023-09-14 On August 8 1900 at the second International Congress of Mathematicians in Paris David Hilbert delivered his famous lecture in which he described twenty three problems that were to play an influential role in mathematical research A century later on May 24 2000 at a meeting at the Collège de France the Clay Mathematics Institute CMI announced the creation of a US 7 million prize fund for the solution of seven important classic problems which have resisted solution The prize fund is divided equally among the seven problems There is no time limit for their solution The Millennium Prize Problems were selected by the founding Scientific Advisory Board of CMI Alain Connes Arthur Jaffe Andrew Wiles and Edward Witten after consulting with other leading mathematicians Their aim was somewhat different than that of Hilbert not to define new challenges but to record some of the most difficult issues with which mathematicians were struggling at the turn of the second millennium to recognize achievement in mathematics of historical dimension to elevate in the consciousness of the general public the fact that in mathematics the frontier is still open and abounds in important unsolved problems and to emphasize the importance of working towards a solution of the deepest most difficult problems The present volume sets forth the official description of each of the seven problems and the rules governing the prizes It also contains an essay by Jeremy Gray on the history of prize problems in mathematics

**Knowledge, Expertise and the Professions** Michael Young, Johan Muller, 2014-04-24 It has long been recognised that specialised knowledge is at the core of what distinguishes professions from other occupations The privileged status of professions in most countries however together with their claims to autonomy and access to specialised knowledge is being increasingly challenged both by market pressures and by new instruments of accountability and regulation Established and emerging professions are increasingly seen as either the solution or as sources of conservatism and resistance to change in western economies and recent developments in professional education draw on a competence model which emphasises what newly qualified members of a profession can do rather than what they know This book applies the disciplines of the sociology of knowledge and epistemology to the question of professional knowledge What is this knowledge It goes beyond traditional debates between knowing how and knowing that and theory and practice The chapters cover a wide range of issues from discussions of the threats to the knowledge base of established professions including engineers and architects to the fraught situations faced by occupations whose fragile knowledge base and professional status is increasingly challenged by new forms of control While recognising that graduates seeking employment as members of a profession need to show their capabilities the book argues for reversing the trend that blurs or collapses the skill knowledge distinction If professions are to have a future then specialised knowledge is going to be more important than ever before Knowledge Expertise and the Professions will be key reading for students researchers and academics in the fields of professional expertise further education higher education the sociology of education and the sociology of the professions
