## AP Physics 1

### Lab Report Format

The labs in AP Physics 1 will usually require you to write your own formal lab report. These formal lab reports should include enough information that someone from outside our physics class could read and understand in general terms what you did and what you found out. All formal lab reports are to be typewritten and submitted online via Edmodo. The reports are based on the information you collect in lab, which must be maintained in a bound composition notebook.

There are certain items that must be included in any formal lab report.

**Name and Period-** Include these so the lab report can be graded independently of your lab book.

**Lab Partners-** Each person submits his or her own report, unless otherwise instructed. However, please list the people in your lab group on your report. Separate their names from yours so I know who wrote the report.

**Title-** Copy the title of the lab from the textbook, lab handout or other source.

Each of the following sections should be prefaced with the section names.

**Purpose-** Write a statement of the problem to be investigated. It may involve a hypothesis to be tested or a relationship between variables to be identified. It provides the overall direction for the laboratory investigation, and must be referenced in the conclusion.

**Apparatus-** Include a listing of all lab apparatus used in the investigation, along with a detailed, labeled diagram to illustrate the configuration of the apparatus. The diagram should help explain how the lab was conducted, and not simply provide pictures of the items used.

**Procedure-** Identify and name all experimental variables and briefly describe how the variables were controlled or manipulated. Someone who was not present during the lab should be able to understand how the experiment was performed by reading the procedure.

**Data-** Include the data from the lab. Data consist of those values measured directly from the experimental apparatus. No values obtained by mathematical manipulations or interpretations should be included in this part of the report. Data should consist of as many trials as judgment would indicate necessary. All data collected in a lab should be recorded in a permanent format (for example, on a saved computer file if the data were collected electronically or in the bound lab notebook) by the person charged with recording data for that lab. You can recopy the data when writing your lab report, but the original record should be kept for reference. You will usually record data in table format. The units for measurements (kg, m, s, etc.) should be specified in the column heading only.

## Ap Physics Lab Report:

**America's Lab Report** National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Board on Science Education, Committee on High School Laboratories: Role and Vision, 2005-12-20 Laboratory experiences as a part of most U.S. high school science curricula have been taken for granted for decades but they have rarely been carefully examined. What do they contribute to science learning? What can they contribute to science learning? What is the current status of labs in our nation's high schools as a context for learning science? This book looks at a range of questions about how laboratory experiences fit into U.S. high schools. What is effective laboratory teaching? What does research tell us about learning in high school science labs? How should student learning in laboratory experiences be assessed? Do all students have access to laboratory experiences? What changes need to be made to improve laboratory experiences for high school students? How can school organization contribute to effective laboratory teaching? With increased attention to the U.S. education system and student outcomes, no part of the high school curriculum should escape scrutiny. This timely book investigates factors that influence a high school laboratory experience, looking closely at what currently takes place and what the goals of those experiences are and should be. Science educators, school administrators, policy makers, and parents will all benefit from a better understanding of the need for laboratory experiences to be an integral part of the science curriculum and how that can be accomplished.
