Gradecki,Jim Cole,2003-10-07 A comprehensive tutorial on how to use the power of Velocity 1.3 to build Web sites and generate content Designed to work hand in hand with Apache Turbine Struts and servlets Velocity is a powerful template language that

greatly enhances the developer's ability to customize Web sites. It separates Java code from the Web pages making a site more maintainable. Because of this it is a viable alternative to JSPs and PHP and is expected to become the standard template engine. In addition to its use with Struts and Turbine, Velocity can also be used to generate Java and XML source code, XML schemas, HTML templates, and SQL code. Even with all its promise, finding expert instructions on how to properly program with this language has been difficult. This code-intensive tutorial gives you all the tools you'll need. It begins by quickly bringing you up to speed on all of the Velocity fundamentals and the Velocity Template Language. You'll then learn how to apply Velocity in a variety of areas with the help of richly detailed code examples. Additionally, you'll be taken through the steps of building a complete application in order to see how you can utilize all of the techniques and technologies discussed in the book. Covering the latest features of Velocity.

1. 3 Mastering Apache Velocity shows you how to Build Java based Web sites with Struts servlets Turbine and other open source tools. Generate a wide variety of Web content and code including Java XML SQL and Postgres.

**Real-Time Systems Symposium** American Society of Mechanical Engineers, 2004      **The British National Bibliography** Arthur James Wells, 2004      **PROFESS STRUTS**, CARNELL, 2003-03-04 Building web applications that are maintainable and extensible requires a significant amount of design and planning before even a single line of code can be written. However, by leveraging pre-written development frameworks, a development team can reduce the amount of time it takes to deploy an application while at the same time promoting reuse. Traditionally, development frameworks required significant amounts of time and energy to implement. The alternative to implementing a framework was to purchase one, but this was often an expensive option that required a significant commitment to one software vendor.      **NASA SP.**, 1990
