Electronic Brake Control

IMPORTANT:

Read the following instructions carefully before installing the Agility™ Electronic Brake Control. If you have any concerns with this product or the installation process, our technical support team can assist you. Call 1-800-635-0129.

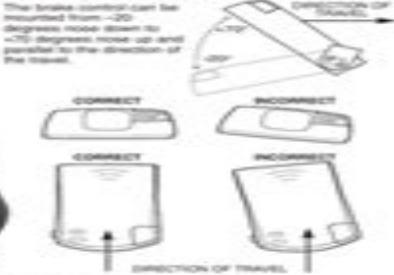

- A. Vertical slide for manual override
- B. Emergency stop button
- C. Emergency stop button
- D. Digital power setting buttons
- E. Mounting bracket holes

INSTALLATION PRECAUTIONS:

- Breaking capacity is for 2, 4, 6 or 8 trailer brakes.
- This brake control will apply the trailer brakes while in reverse.
- This brake control is inertia activated. When the vehicle is not moving, the trailer control will not automatically apply the trailer brakes. In this case, the vertical slide must be depressed to activate the trailer brakes.
- This brake control is not reverse polarity protected. Reversing the connection to the vehicle battery or the breakaway battery on the trailer will damage the brake control.
- This brake control is designed to operate with electric trailer brakes and not electro-hydraulic brake systems.

INSTALLATION GUIDE:

1. Mount the bracket to a secure location with Phillips screws provided (10). The slide will be able to view the display and easily access the vertical slide.
2. Attach the brake control to the bracket using the six screws provided (10).
3. Adjust the brake control to the desired angle and tighten screws until snug.

CAUTION: Using larger/bigger screws may damage the unit.

WIRING GUIDE:

The Agility™ comes equipped with either a quick connector plug or just wires exiting the back of the control.

OPTION: If your vehicle comes equipped with a factory tow package, but does not have a quick connector, you may want to purchase the **Vehicle Specific Plug-in Sampler™** Brake Control Quick Connector and simply plug into the factory tow package plug. Then remove the quick connector plug on the trailer side and replace the wires to the function wires under the dash.

QUICK INSTALL OPTION:

Some tow packages come with a key or go to www.hopkinsbrakesolutions.com to purchase Plug-in Sampler™ Brake control connectors.

VEHICLE MANUFACTURER WIRING CODES:

Vehicle Manufacturer	Color	Blau	Black	White	Red

CARTER 20-21	BLU	BLACK	WHITE	RED	WHITE

For installations on vehicles without factory tow package use the following procedure (remove the quick connector plug if present):

1. Be sure to use proper wire gauge when installing your wires (12 gauge for electric brakes and positive power, 16 gauge for the stop lamp wires and grounds).
2. Connect the blue wire to the negative post on the vehicle battery. Grounding to any metal part may cause intermittent brake control operation or failure.
3. Attach 20-amp circuit breaker (20 or 30 breaker uses 20-amp wire, 15 or 20 breaker uses 15-amp wire) to the positive terminal of the vehicle battery. Ground the negative side of the circuit breaker to the negative post on the vehicle battery.
4. Splice the red wire into the cold side of the vehicle's stop switch (located by the brake pedal). Find the wire by using a circuit tester and probing for the wire that powers the vehicle stop lamp when the brake pedal is pressed.
5. Route the blue wire from the brake control to the vehicle side towning connector at the rear of the tow vehicle.

NOTES:

- Some late model Ford/Mercury trucks and sport utility vehicles have 12-volt and 24-volt wires. For vehicles with 24-volt, the blue wire must be connected to the 24-volt wire. This wire goes directly to ground when not in use. Splicing into this wire will short-circuit your brake control and possibly damage the unit.
- For Chevrolet vehicles, 1994-95, if your vehicle does not have a three terminal power switch, the power switch will be active in the function wires under the dash. The electric brake wire and 12-volt power lead will be connected to the three terminal of the power switch. Then the power switch will be active in the function wires under the dash.
- For Dodge 2000-05, to find the cold side of the stop switch, you must have the key in the "on" position.
- Ford and Dodge tow packages come with a 20-amp battery feed wire system that will accommodate 20 and 4 trailer-brake requirements. An upgrade to a 30-amp (12 gauge) battery wire system will be needed for 8 trailer-brakes.

OPERATING / SETTING YOUR CONTROLLER:

1. Red dot on bottom right hand corner of digital display indicates trailer is connected.

2. Blue arrow (line icon) indicates trailer is not connected.

3. Press the power button (+/-) on top of the control adjust power sent to the trailer brakes. Pressing the (+/-) button decreases power. Pressing the (+/-) button will be displayed as a percentage on the digital display from 5 to 99% increments of 5%.

4. Set the response. This feature makes your trailer braking response more or less sensitive. A setting of 1 indicates least sensitive. A setting of 5 indicates most sensitive. Adjust sensitivity by pressing the button labeled "S" on the side of the unit.

5. SC indicates that a short circuit has occurred.

TESTING / ADJUSTING THE BRAKING RESPONSE:

Connect to your trailer and test drive on a dry open area at low speed (20 to 25 mph). Apply vehicle brakes aggressively.

1. If the braking feels too soft, adjust down the power setting to just before trailer lock-up by pressing the (+/-) power button.
2. If the braking performance from the trailer feels as if it is pushing the tow vehicle, adjust the power setting higher by pressing the (+/-) power button.

Repeat process until smooth braking is obtained.

recommended practice This recommended practice does not address parking brake system performance Parking brake
system performance both static and dynamic conditions is the responsibility of the OEM vehicle manufacturer or
manufacturers that modify the vehicle by adding special vocational required equipment such as but not limited to outriggers
cranes etc There are several parking brake indication and control philosophies for hydraulic braked vehicles with a GVWR
greater than 4540 kg 10 000 lb For future vehicle and parking brake system designs this recommended practice is intended

Automatic Transmissions Manual Control Sequence recommended practice as it relates to the various parking brake
indication options Major vehicle manufacturers were surveyed and current practices were identified to assist in the
development of this document Where necessary or possible all current practices were included in this document to allow for
alternative methods to provide the specific functions The task force recognized that both the P and PB indication options
existed in current vehicle applications The team evaluated the benefits and risks of both approaches and the following is a
summary of the results In conclusion it was decided to recommend the PB indication as the standard method PB gives
indication to the driver that the parking mechanism is a friction based product that wears and can yield over time is different
from a park pawl in that it can sometimes be released independently by other manual means may not be acceptable in
Canada French language and ISO complications P minimizes confusion for driver why should he or she care how vehicle is
held in park as long as it is Besides the indication recommendations a transmission parking pawl and a mechanical friction
parking brake should not be actuated with the same or single actuation device or method Besides the operator not knowing
which parking brake function is actually holding the vehicle there can be binding and brake release sequence issues with
having a single parking actuation function
