[Global Agriculture and the American Farmer](#) Kimberly Ann Elliott,2017-06-27 The United States is one of the world s largest producers and exporters of a range of agricultural commodities and the largest provider of foreign assistance so U S policies have big effects on global food security and other global public goods linked to agriculture On the positive side of the ledger President Obama created the Feed the Future aid initiative to promote agricultural development in poorer countries as a tool to achieve the global goals of ending hunger and extreme poverty which are mostly rural But that generosity is undercut by U S support for farmers that distorts global markets and ignores negative spillovers for the rest of the world In this book Elliott focuses on three policy areas that are particularly damaging for developing countries traditional agricultural subsidy and trade policies that support the incomes of American farmers at the expense of farmers elsewhere the biofuels mandate which in its current form increases market volatility while doing little if anything to mitigate climate change and weak regulation of antibiotic use in livestock which contributes to the global spread of drug resistant super bugs While noting that broad reforms are needed to fix these problems Elliott also identifies practical steps that U S policymakers could take in the relatively short run to improve farm policies for American taxpayers and consumers as well as for the poor and vulnerable in developing countries

Baldwin, Sambuddha Goswami, 2021-10-15 Many developing countries are falling behind sustainable development goals food and nutrition levels have deteriorated due to conflict climate change and the Covid pandemic while global ambitions for achieving sustainable food security and adequate nutrition have increased. But what are the prospects of achieving sustainable healthy food for all? What is the best response to concerns about growing differentiation among developing countries in terms of domestic agricultural and industrial performance? How have global institutions established during the post World War Two period helped developing countries to deal with the past economic fallout of food, fuel and financial crises? Food for All explores how developments since these organizations were established have led to changes in the provision of international financial and technical assistance in support of the global food and agriculture system and how developing countries' own efforts have helped transform them. These developments and the increase in the number of global actors have expanded and complicated global governance presenting both opportunities for as well as challenges to the improvement of food systems. This volume provides an analysis of the structure, coordination and management of the Food and Agriculture Organization of the United Nations FAO, the International Fund for Agricultural Development IFAD and the World Food Programme WFP. It also looks at the World Bank the largest international funder of policy advice and investment projects and CGIAR a leading funder of international agricultural research.
