Roberto, 2022-05-26 **Karl Popper, Science and Enlightenment** Nicholas Maxwell, 2017-09-26 Here is an idea that just might save the world It is that science properly understood provides us with the methodological key to the salvation of humanity A version of this idea can be found in the works of Karl Popper Famously Popper argued that science cannot verify theories but can only refute them and this is how science makes progress Scientists are forced to think up something better and it is this according to Popper that drives science forward But Nicholas Maxwell finds a flaw in this line of argument

Physicists only ever accept theories that are unified theories that depict the same laws applying to the range of phenomena to which the theory applies even though many other empirically more successful disunified theories are always available. This means that science makes a questionable assumption about the universe namely that all disunified theories are false. Without some such presupposition as this the whole empirical method of science breaks down. By proposing a new conception of scientific methodology which can be applied to all worthwhile human endeavours with problematic aims Maxwell argues for a revolution in academic inquiry to help humanity make progress towards a better more civilized and enlightened world.

From Classical Breeding to Modern Biotechnological Advancement in Horticultural Crops - Trait Improvement and Stress Resilience, volume II Mohammad Irfan, Pankaj Kumar, Mohammed Wasim Siddiqui, 2025-04-29. Horticultural crops such as fruits, vegetables, medicinal, aromatic, and ornamental plants are used to diversify the human diet, improve health and enhance our living environment. Horticultural crops, particularly fruits and vegetables, are excellent sources of antioxidants, minerals, vitamins, fibers, carbohydrates, and organic acids required for the human diet, whereas ornamentals are worth of aesthetic nature. Pre and post harvest quantitative and qualitative losses in horticulture crops have always been a concern for farmers and consumers. The yield and nutritional quality of horticultural crops are significantly limited by abiotic and biotic stresses. Furthermore, the perishable nature of horticultural produce results in huge post harvest loss of fruits and vegetables, particularly in developing countries. Therefore, developing approaches and tools for improving pre and post harvest quality attributes and stress resilience is critical for sustainable crop production and diversification.
