Disha Experts,2021-07-01 Double-booked: Effects of overlap between school and farming calendars on education and child labor

Allen IV, James,2024-02-12 Across sub Saharan Africa countries with a greater percentage of overlapping days in their school and farming calendars also have lower primary school survival rates In theory greater overlap between the school and farming calendars should indeed reduce schooling investments and farm based child labor too as it constrains the time allocation opportunity set for both productive activities I causally identify such effects by leveraging a four month shift to the school calendar in Malawi that exogenously changed the number of days that the school calendar overlapped with specific crop calendars which differentially affected communities based on their pre policy crop allotments Using panel data for school aged children I find that a 10 day increase in school calendar overlap during peak farming periods significantly decreases school advancement by 0 34 grades one lost grade for every three children and the share of children engaged in peak period household farming by 11 percentage points after four years Secondary analyses reveal stronger negative schooling impacts for girls and poorer households driven by overlap with the labor intensive planting period A policy simulation illustrates that adapting the school calendar to minimize overlap with peak farming periods is a highly cost effective educational intervention to increase school participation by better accommodating farm labor demand *Science Education in Canada* Christine D. Tippett,Todd M. Milford,2019-07-01

This book offers a meso level description of demographics science education and science teacher education Representing all 13 Canadian jurisdictions the book provides local insights that serve as the basis for exploring the Canadian system as a whole and function as a common starting point from which to identify causal relationships that may be associated with Canada's successes The book highlights commonalities consistencies and distinctions across the provinces and territories in a thematic analysis of the 13 jurisdiction specific chapters Although the analysis indicates a network of policy and practice issues warranting further consideration the diverse nature of Canadian science education makes simple identification of causal relationships elusive Canada has a reputation for strong science achievement However there is currently limited literature on science education in Canada at the general level or in specific areas such as Canadian science curriculum or science teacher education This book fills that gap by presenting a thorough description of science education at the provincial territorial level as well as a more holistic description of pressing issues for Canadian science education NCERT Geography Class 12 Dr.
