### **Computational Economic Analysis for Engineering and Industry** Adedeji B. Badiru, Olufemi A.

Omitaomu, 2007-06-07 Recent global anxiety indicates that more focus needs to be directed at economic issues related to industry. Conventional techniques often do not adequately embrace the integrated global factors that affect unique industries and industry-focused computational tools have not been readily available. Until now, Computational Economic Analysis for Engi **FCS Economic Environment L3**, 2008 The European Union and the Technology Shift Antonina Bakardjieva Engelbrekt, Karin Leijon, Anna Michalski, Lars Oxelheim, 2021-02-08 This book explores the multiple challenges that the global technology shift is posing to the EU. It raises the question of how European societies will mobilize the positive effects of the rapid technological advancement in digitalization, robotization and artificial intelligence while mitigating the negative consequences in terms of job losses, cybercrime and social and political polarization. From the vantage point of experts from economics, law and political science, this book provides insights into the role that the EU is and ought to be playing in regulating global platform companies, addressing taxation in the digital economy, mitigating job displacements on the labour market and tackling ethical concerns of artificial intelligence and the prospect of digital democracy. All chapters are based on up-to-date research findings, succinct assessment of the current state of affairs and ongoing debates. They conclude with policy recommendations for policy makers on European and national levels. This volume has a solid foundation in the highly topical question of technological change. More importantly, the individual chapters are written by qualified scholars whose analytically advanced contributions are likely to interest a wide audience. I can strongly recommend this book for scholars and students in political science, law and economics. Carl Fredrik Bergström, Professor of European Law, Uppsala University, Sweden. When the Commission took office in 2019, it put forward its vision as to how Europe's digital future could be shaped in a way that makes the digital transition enrich people's lives and make sure that European businesses fully benefit from the opportunities offered by digital technologies. Then COVID drastically accelerated the take-up of digital solutions. As the digital transformation affects every single one of us, it is important that we have the widest possible debate on its inherent risks and opportunities. This is why I warmly recommend this book. It brings together an interdisciplinary set of scholars able to analyse the multifaceted implications of the technological shift. And I could not agree more with the book's main takeaway, i.e. that we need to create an adaptive regulatory framework capable of harnessing the positive effects of technological changes while buttressing the negative impact on European society and citizens.
